Product Information

PQRY-P300YHM-A : WR2 Series 12hp Water Cooled Unit

R410A Heat Recovery

The WR2 system has double heat recovery potential, making this system very economical. Not only does it produce heat recovery from indoor units on the same refrigerant circuit, it also produces heat recovery via the water circuit between heat source units. Like the air source versions, the water cooled units benefit from a modular design approach. A twinning kit is required for double combinations.
