NOTE:

- RoHS compliant products have <G> mark on the spec name plate.
- For servicing of RoHS compliant products, refer to the RoHS Parts List.

Revision A :

- MXZ-3A54VA-[E1] and MXZ-4A71VA-[E2] have been added.
Quick clean kit has been removed. (Refer to 2.)
- MXZ-2A40VA-[E1] and MXZ-2A52VA-[E2] have been added.

Revision B :

- MXZ-2A30VA-[E1] and MXZ-2A40VA-[E2] have been added.
- "Check of HPS" has been corrected.
- RoHS PARTS LIST has been added.

Revision C :

- MXZ-2A52VA-[E2], MXZ-3A54VA-[E3], MXZ-4A71VA-[E3], MXZ-4A80VA-[E2] and MXZ-5A100VA-[E1] have been added.

Revision D:

- MXZ-3A54VA-[E4], and MXZ-4A71VA-[E4] have been added.
- The content of pre-heat control (12-3) has been corrected.
- **5. SPECIFICATION** has been corrected.

Revision E:

- MXZ-2A30VA-[E1] has been added.
- **4. INDOOR UNITS COMBINATION** of MXZ-5A100VA-[E2] has been changed.

Revision F:

- MXZ-3A54VA-[E5] and MXZ-4A71VA-[E5] have been added.

Revision G:

- MXZ-3A54VA-[E6] and MXZ-4A71VA-[E6] have been added.

1

TECHNICAL CHANGES

MXZ-A26WV -[E1] → MXZ-3A54VA -[E1]

1. Indication of capacity has been changed. (BTU → kW)
2. Capacity specification has been changed. (Cooling capacity 7.1kW → 5.4kW)
3. Dimensions of unit have been changed. (W900 × H900 × D320 → W840 × H710 × D330)
4. Combinations of connectable indoor units have been changed.
5. Capacity class of connectable indoor units has been changed.
6. Communication system has been changed.
7. Power supply way has been changed (change to supply to outdoor unit).
8. Compressor has been changed. (TNB220FMCH → SNB130FLDH1)
9. High-pressure switch has been removed.
10. Outdoor fan motor has been changed. (PM8H60-UA → RC0J60-AA)
11. Evaporation temperature thermistor has been removed.
12. Ambient temperature thermistor has been added.
13. New dip switch has been added to the controller board for "Locking the operation" mode and "Lowering the operating noise" mode.
14. A Quick Clean Kit has been added.

MXZ-A32WV -[E1] → MXZ-4A71VA -[E1]

1. Indication of capacity has been changed. (BTU → kW)
2. Capacity specification has been changed. (Cooling capacity 8.0kW → 7.1kW)
3. Dimensions of unit have been changed. (W900 × H900 × D320 → W840 × H710 × D330)
4. Combinations of connectable indoor units have been changed.
5. Capacity class of connectable indoor units has been changed.
6. Communication system has been changed.
7. Power supply way has been changed (change to supply to outdoor unit).
8. Compressor has been changed. (TNB220FMCH → SNB130FLDH1)
9. High-pressure switch has been removed.
10. Outdoor fan motor has been changed. (PM8H60-UA → RC0J60-AA)
11. Evaporation temperature thermistor has been removed.
12. Ambient temperature thermistor has been added.
13. New dip switch has been added to the controller board for "Locking the operation" mode and "Lowering the operating noise" mode.
14. A Quick Clean Kit has been added.

MXZ-A32WV -E1 → MXZ-4A80VA -E1

1. Indication of capacity has been changed. (BTU → kW)
2. Communication system has been changed.
3. Power supply way has been changed (change to supply to outdoor unit).
4. Evaporation temperature thermistor has been removed.
5. Ambient temperature thermistor has been added.
6. New dip switch has been added to the controller board for "Locking the operation "mode and "Lowering the operating noise "mode.
7. A Quick Clean Kit has been added.

MXZ-A14WV -E2 → MXZ-2A40VA -E1

1. Indication of capacity has been changed. (BTU → kW)
2. Dimensions of unit have been changed. (W840 × H640 × D330 → W800 × H550 × D285)
3. Communication system has been changed.
4. Power supply way has been changed (change to supply to outdoor unit).
5. Compressor has been changed. (SNV092FJYH → SNB130FKCH)
6. Outdoor fan motor has been changed. (RA6V49 → RC0J50-CF)
7. Evaporation temperature thermistor has been removed.
8. Gas pipe temperature thermistor has been removed.
9. Ambient temperature thermistor has been added.

MXZ-A18WV -E2 → MXZ-2A52VA -E1

1. Indication of capacity has been changed. (BTU → kW)
2. Cooling capacity specification has been changed. (5.4 kW → 5.2 kW)
3. Heating capacity specification has been changed. (6.6 kW → 6.4 kW)
4. Dimensions of unit have been changed. (W840 × H640 × D330 → W800 × H550 × D285)
5. Communication system has been changed.
6. Power supply way has been changed (change to supply to outdoor unit).
7. Compressor has been changed. (SNV092FJYH → SNB130FKCH)
8. Outdoor fan motor has been changed. (RA6V49 → RC0J50-CF)
9. Evaporation temperature thermistor has been removed.
10. Gas pipe temperature thermistor has been removed.
11. Ambient temperature thermistor has been added.

MXZ-3A54VA -E1 → MXZ-3A54VA -E2

MXZ-4A71VA -E1 → MXZ-4A71VA -E2

1. Quick clean kit has been removed.

MXZ-2A30VA -E1

1. New model

MXZ-2A40VA -E1 → MXZ-2A40VA -E2

1. Compressor has been changed. (SNB130FKCH → KNB092FEDH)
2. Outdoor heat exchanger has been changed.

MXZ-2A52VA -E1 → MXZ-2A52VA -E2

1. Compressor has been changed. (SNB130FKCH → SNB130FKMH)
2. Inverter P.C. board has been changed.

MXZ-3A54VA -_{E2} → MXZ-3A54VA -_{E3}

1. Compressor has been changed. (SNB130FLDH1 → SNB130FLEH1)
2. Electronic control P.C. board has been changed.

MXZ-4A71VA -_{E2} → MXZ-4A71VA -_{E3}

1. Compressor has been changed. (SNB130FLDH1 → SNB130FLEH1)
2. Electronic control P.C. board has been changed.

MXZ-4A80VA -_{E1} → MXZ-4A80VA -_{E2}

1. Ball valve has been changed to stop valve.
2. Gas pipe temperature thermistor has been removed.
3. Pre-heat control has been added.
4. Auto line correcting function has been added.
5. Noise filter P.C. board has been changed.
6. Electronic control P.C. board has been changed.
7. Weight has been changed. (70kg → 67kg)

MXZ-5A100VA -_{E1}

1. New model

MXZ-3A54VA -_{E3} → MXZ-3A54VA -_{E4}

1. Compressor has been changed. (SNB130FLEH1 → SNB130FGBH1)
2. Electronic control P.C. board has been changed.
3. Gas pipe temperature thermistor has been removed.
4. Pre-heat control has been added.
5. Power board has been changed.

MXZ-4A71VA -_{E3} → MXZ-4A71VA -_{E4}

1. Compressor has been changed. (SNB130FLEH1 → SNB130FGBH1)
2. Electronic control P.C. board has been changed.
3. Gas pipe temperature thermistor has been removed.
4. Pre-heat control has been added.
5. Power board has been changed.

MXZ-2A30VA -_{E1} → MXZ-2A30VA -_{E2}

1. Compressor has been changed. (KNB092FEDH → KNB073FGDH)
2. Inverter P.C. board has been changed.

MXZ-3A54VA -_{E4} → MXZ-3A54VA -_{E5}

1. Electronic control P.C. board has been changed.
2. Noise filter P.C. board has been changed.
3. Ball valve has been changed to stop valve.
4. Sub panel has been added.

MXZ-4A71VA -_{E4} → MXZ-4A71VA -_{E5}

1. Electronic control P.C. board has been changed.
2. Noise filter P.C. board has been changed.
3. Ball valve has been changed to stop valve.
4. Sub panel has been added.

MXZ-3A54VA -_{E5} → MXZ-3A54VA -_{E6}

MXZ-4A71VA -_{E5} → MXZ-4A71VA -_{E6}

1. Electronic control P.C. board has been changed.

INFORMATION FOR THE AIR CONDITIONER WITH R410A REFRIGERANT

- This room air conditioner adopts HFC refrigerant (R410A) which never destroys the ozone layer.
 - Pay particular attention to the following points, though the basic installation procedure is same as that for R22 air conditioners.
- ① As R410A has working pressure approximate 1.6 times as high as that of R22, some special tools and piping parts/materials are required. Refer to the table below.
- ② Take sufficient care not to allow water and other contaminations to enter the R410A refrigerant during storage and installation, since it is more susceptible to contaminations than R22.
- ③ For refrigerant piping, use clean, pressure-proof parts/materials specifically designed for R410A. (Refer to 2. Refrigerant piping.)
- ④ Composition change may occur in R410A since it is a mixed refrigerant. When charging, charge liquid refrigerant to prevent composition change.

		New refrigerant	Previous refrigerant
Refrigerant	Refrigerant	R410A	R22
	Composition (Ratio)	HFC-32: HFC-125 (50%:50%)	R22 (100%)
	Refrigerant handling	Pseudo-azeotropic refrigerant	Single refrigerant
	Chlorine	Not included	Included
	Safety group (ASHRAE)	A1/A1	A1
	Molecular weight	72.6	86.5
	Boiling point (°C)	-51.4	-40.8
	Steam pressure [25°C](Mpa)	1.557	0.94
	Saturated steam density [25°C](Kg/m ³)	64	44.4
	Combustibility	Non combustible	Non combustible
	ODP*1	0	0.055
	GWP*2	1730	1700
	Refrigerant charge method	From liquid phase in cylinder	Gas phase
	Additional charge on leakage	Possible	Possible
Refrigeration oil	Kind	Incompatible oil	Compatible oil
	Color	Non	Light yellow
	Smell	Non	Non

*1 :Ozone Depletion Potential : based on CFC-11

*2 :Global Warming Potential : based on CO₂

	New Specification	Current Specification
Compressor	<p>The incompatible refrigeration oil easily separates from refrigerant and is in the upper layer inside the suction muffler. Raising position of the oil back hole enables to back the refrigeration oil of the upper layer to flow back to the compressor.</p>	<p>Since refrigerant and refrigeration oil are compatible, refrigeration oil goes back to the compressor through the lower position oil back hole.</p>

NOTE : The unit of pressure has been changed to MPa on the international system of units (SI unit system).

The conversion factor is: $1(\text{MPa [Gauge]}) = 10.2(\text{kgf/cm}^2 \text{ [Gauge]})$

Conversion chart of refrigerant temperature and pressure

NOTE : The unit of pressure has been changed to MPa on the international system of units (SI unit system).

The conversion factor is: $1(\text{MPa [Gauge]}) = 10.2(\text{kgf/cm}^2 \text{ [Gauge]})$

1. Tools dedicated for the air conditioner with R410A refrigerant

The following tools are required for R410A refrigerant. Some R22 tools can be substituted for R410A tools.

The diameter of the service port on the stop valve in outdoor unit has been changed to prevent any other refrigerant from being charged into the unit. Cap size has been changed from 7/16 UNF with 20 threads to 1/2 UNF with 20 threads.

R410A tools	Can R22 tools be used?	Description
Gauge manifold	No	R410A has high pressures beyond the measurement range of existing gauges. Port diameters have been changed to prevent any other refrigerant from being charged into the unit.
Charge hose	No	Hose material and cap size have been changed to improve the pressure resistance.
Gas leak detector	No	Dedicated for HFC refrigerant.
Torque wrench	Yes	6.35 mm and 9.52 mm
	No	12.7 mm and 15.88 mm
Flare tool	Yes	Clamp bar hole has been enlarged to reinforce the spring strength in the tool.
Flare gauge	New	Provided for flaring work (to be used with R22 flare tool).
Vacuum pump adapter	New	Provided to prevent the back flow of oil. This adapter enables you to use vacuum pumps.
Electronic scale for refrigerant charging	New	It is difficult to measure R410A with a charging cylinder because the refrigerant bubbles due to high pressure and high-speed vaporization

No: Not Substitutable for R410A Yes: Substitutable for R410A

2. Refrigerant piping

① Specifications

Use the copper or copper-alloy seamless pipe for refrigerant that meet the following specifications.

Outside diameter mm	Wall thickness	Insulation material
6.35	0.8 mm	Heat resisting foam plastic Specific gravity 0.045 Thickness 8 mm
9.52	0.8 mm	
12.7	0.8 mm	
15.88	1.0 mm	

② Flaring work and flare nut

Flaring work for R410A pipe differs from that for R22 pipe.

For details of flaring work, refer to Installation manual "FLARING WORK".

Pipe diameter mm	Dimension of flare nut	
	R410A	R22
6.35	17	17
9.52	22	22
12.7	26	24
15.88	29	27

3. Refrigeration oil

Apply the special refrigeration oil (accessories: packed with indoor unit) to the flare and the union seat surfaces.

4. Air purge

- Do not discharge the refrigerant into the atmosphere.

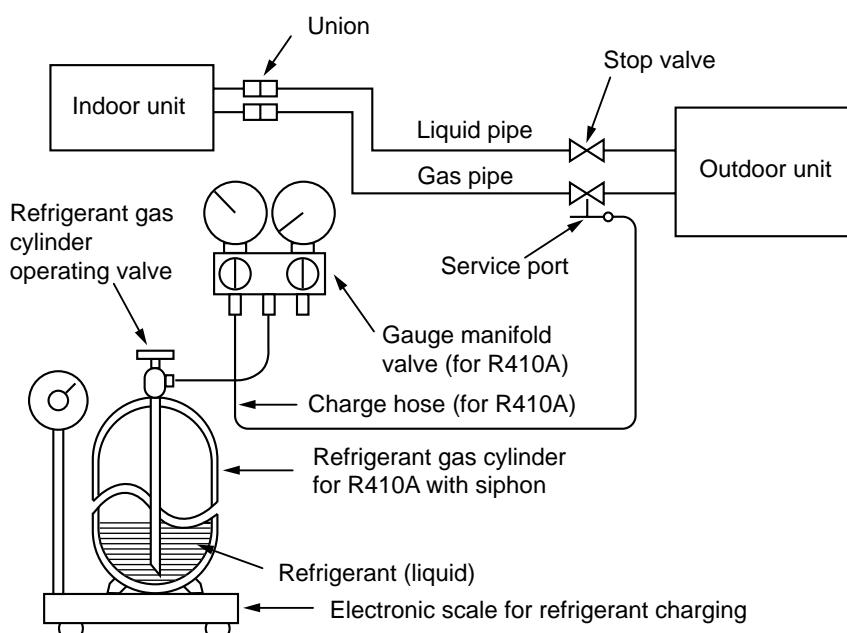

Take care not to discharge refrigerant into the atmosphere during installation, reinstallation, or repairs to the refrigerant circuit.

- Use the vacuum pump for air purging for the purpose of environmental protection.

5. Additional charge

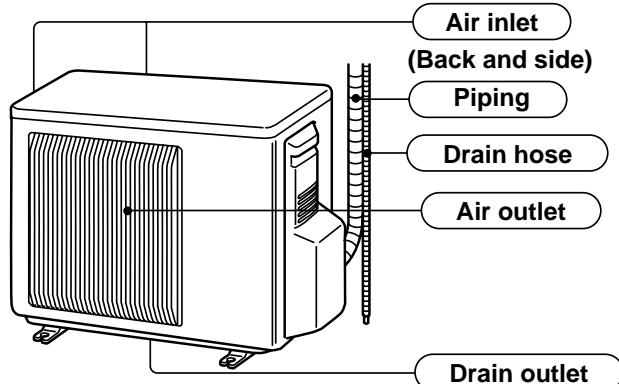

For additional charging, charge the refrigerant from liquid phase of the gas cylinder.

If the refrigerant is charged from the gas phase, composition change may occur in the refrigerant inside the cylinder and the outdoor unit. In this case, ability of the refrigeration cycle decreases or normal operation can be impossible. However, charging the liquid refrigerant all at once may cause the compressor to be locked. Thus, charge the refrigerant slowly.

	Fan speed (High/Low) *3	rpm	850/650	850/650
	Fan speed regulator *3		2	
	Refrigerant filling capacity (R410A)	kg	1.15	
	Refrigeration oil (Model)	cc	320 (NEO22)	

NOTE: •Test conditions are based on ISO 5151. (Refrigerant piping length (one way): 5 m)

•Refer to 3 "INDOOR/OUTDOOR CORRESPONDENCE TABLE" for the combination.

*1 Measured under rated operating frequency.

*2 Electrical data is for only outdoor unit.

*3 These specifications are when all indoor units are operating.

TEST CONDITIONS COOLING INDOOR Dry-bulb temperature 27.0°C Wet-bulb temperature 19.0°C

OUTDOOR Dry-bulb temperature 35.0°C Wet-bulb temperature 24.0°C

HEATING INDOOR Dry-bulb temperature 20.0°C

OUTDOOR Dry-bulb temperature 7.0°C Wet-bulb temperature 6.0°C

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the tables below.

class	Indoor unit		Extension pipe diameter	
	Pipe diameter		Liquid	6.35(1/4)
22/25	Liquid	6.35(1/4)	Liquid	6.35(1/4)
	Gas	9.52(3/8)	Gas	9.52(3/8)

Outdoor unit union diameter		
For	Liquid	6.35(1/4)
Indoor unit A	Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)
	Gas	9.52(3/8)

MXZ-2A40VA - E1 MXZ-2A52VA

Unit: mm

MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b)	20m
Total piping length (a+b)	30m
Bending point for each unit	20
Total bending point	30

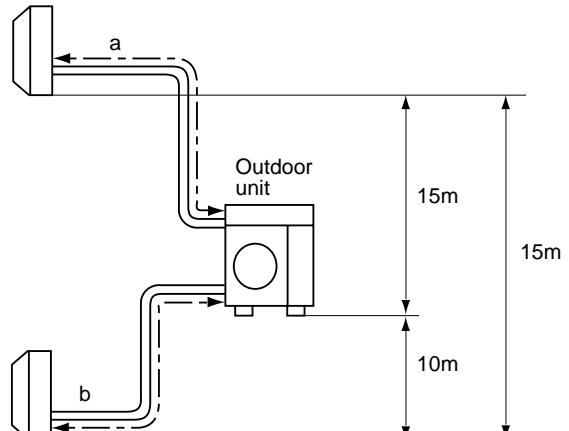

*It does not matter which unit is higher.

ADDITIONAL REFRIGERANT CHARGE

Outdoor unit precharged (g)	Refrigerant piping length (one way, 2 unit total)	
	20m	30m
1,300	0	200

Calculation : $Xg = 20 \text{ g/m} \times (\text{Refrigerant piping length(m)} - 20)$

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the tables below.

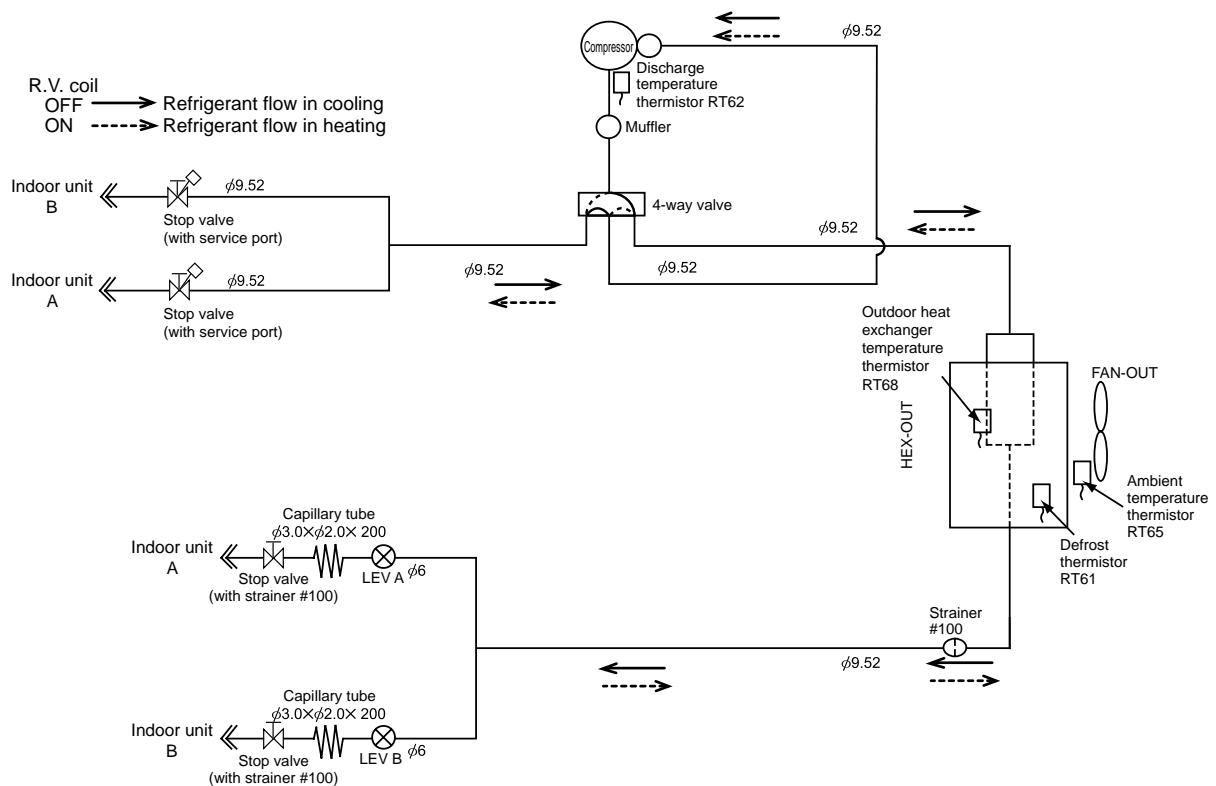

Indoor unit		Extension pipe diameter	
class	Pipe diameter	Liquid	Gas
22/25/35	Liquid	6.35(1/4)	6.35(1/4)
	Gas	9.52(3/8)	9.52(3/8)

Outdoor unit union diameter		
For	Liquid	Gas
Indoor unit A	6.35(1/4)	9.52(3/8)
Indoor unit B	6.35(1/4)	9.52(3/8)

MXZ-2A40VA - E2

Unit: mm

MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b)	20m
Total piping length (a+b)	30m
Bending point for each unit	20
Total bending point	30

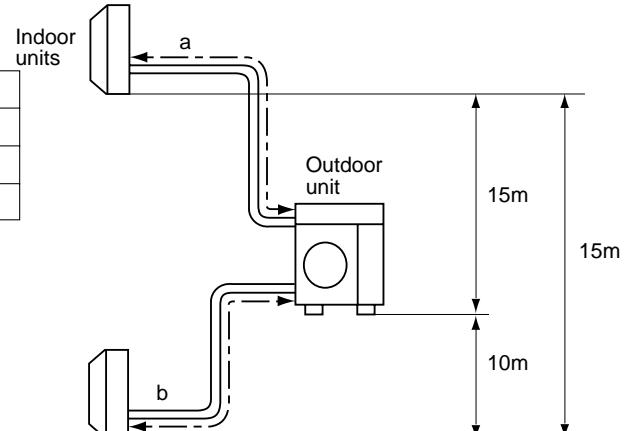

*It does not matter which unit is higher.

ADDITIONAL REFRIGERANT CHARGE

Outdoor unit precharged (g)	Refrigerant piping length (one way, 2 unit total)	
	20m	30m
1,150	0	200

Calculation : $Xg = 20 \text{ g/m} \times (\text{Refrigerant piping length (m)} - 20)$

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the tables below.

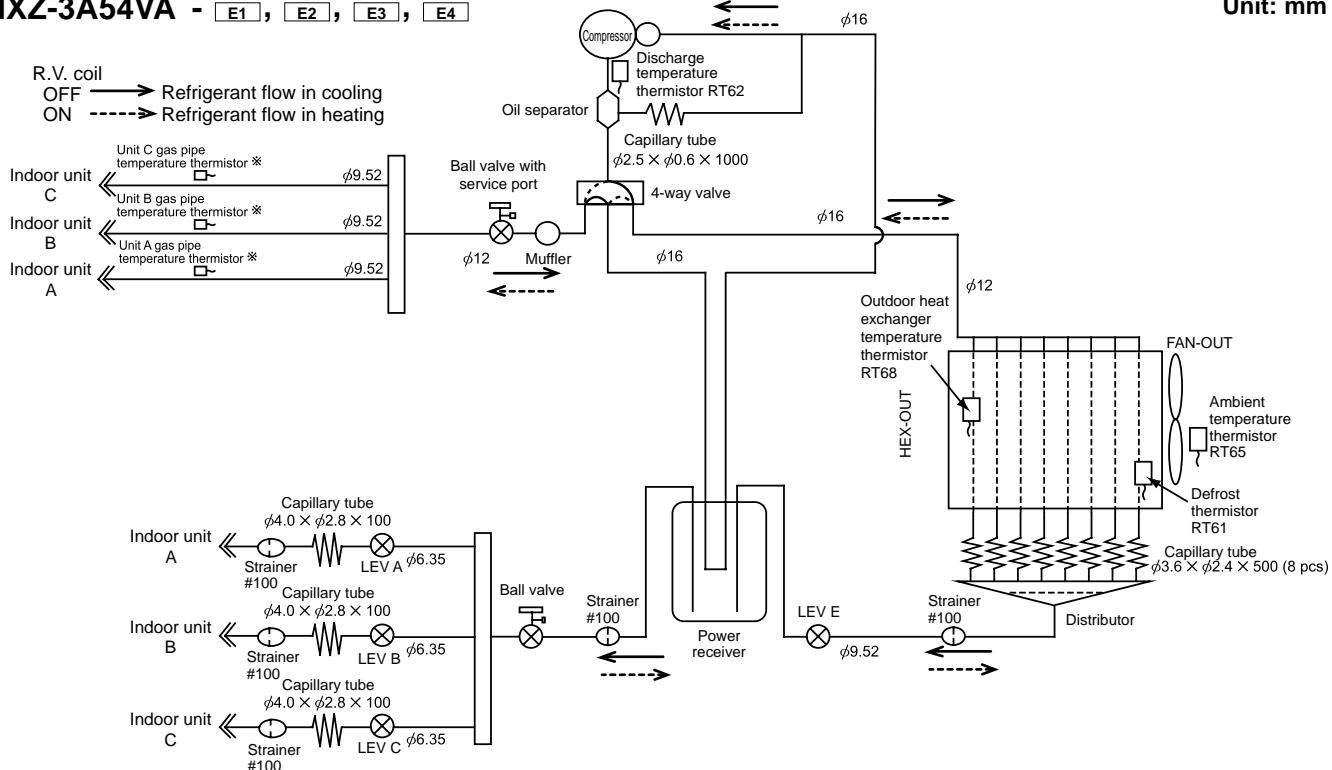

Indoor unit		Extension pipe diameter	
class	Pipe diameter	Liquid	6.35(1/4)
22/25/35	Liquid	6.35(1/4)	6.35(1/4)
	Gas	9.52(3/8)	9.52(3/8)

Outdoor unit union diameter		
For	Liquid	6.35(1/4)
Indoor unit A	Gas	9.52(3/8)
Indoor unit B	Liquid	6.35(1/4)
	Gas	9.52(3/8)

MXZ-3A54VA - [E1, E2, E3, E4]

Unit: mm

* Except MXZ-3A54VA -[E4].

MAX REFRIGERANT PIPING LENGTH

Piping length each indoor unit (a, b, c)	25m
Total piping length (a+b+c)	50m
Bending point for each unit	25
Total bending point	50

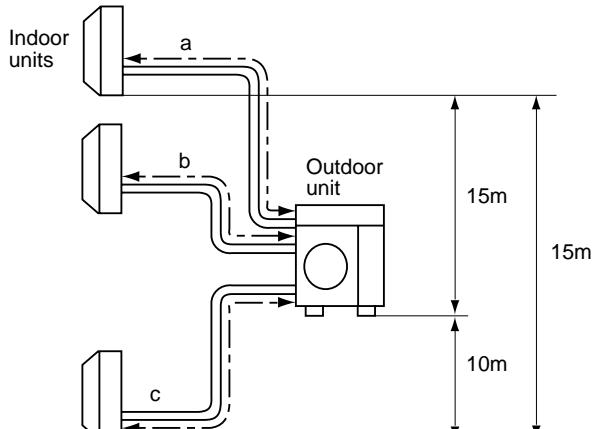

*It does not matter which unit is higher.

ADDITIONAL REFRIGERANT CHARGE

Outdoor unit precharged (g)	Refrigerant piping length (one way, 3 unit total)	
	40m	50m
2,700	0	200

Calculation : $Xg = 20 \text{ g/m} \times (\text{Refrigerant piping length (m)} - 40)$

- Refrigerant pipe diameter is different according to indoor unit to be connected. When using extension pipes, refer to the tables below.
- When diameter of refrigerant pipe is different from that of outdoor unit union, use optional Different-diameter pipe. For further information on Different-diameter pipe, see 17-1.

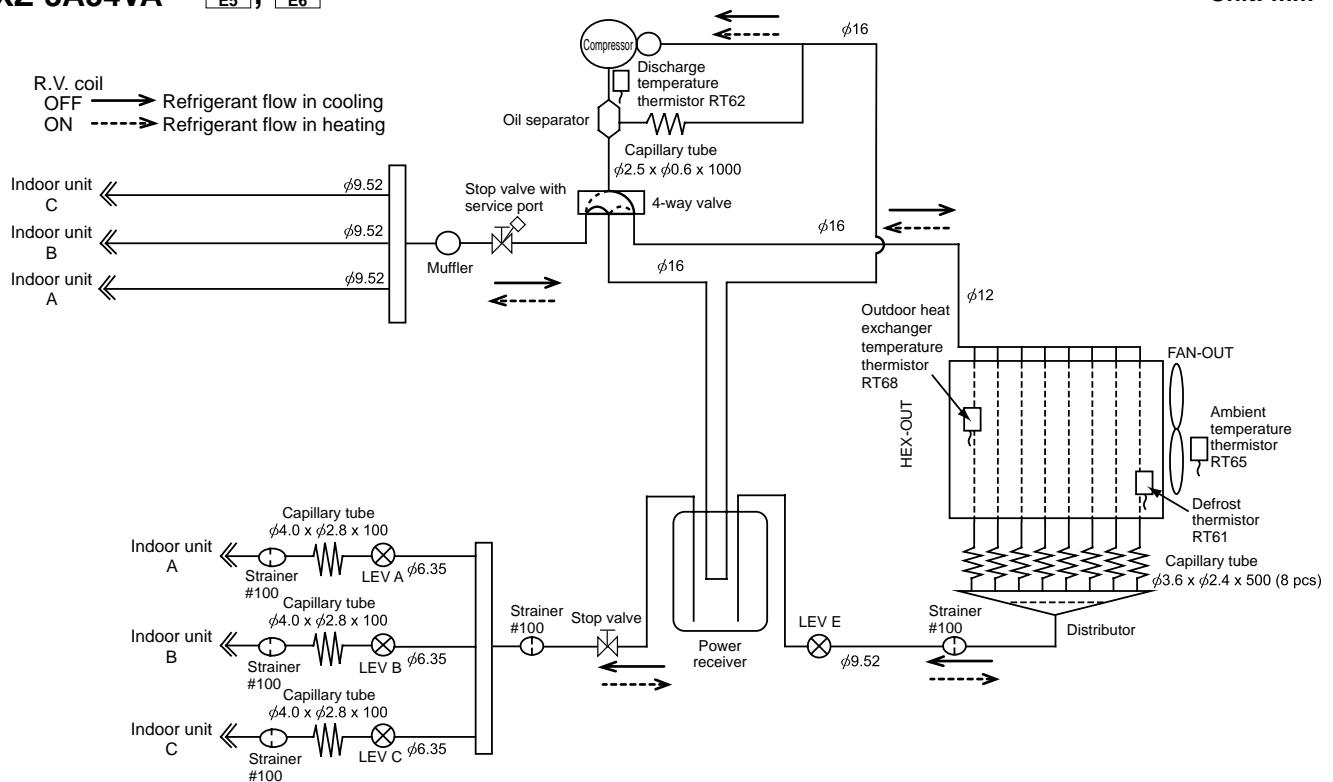

Indoor unit		Extension pipe diameter	
class	Pipe diameter	Liquid	6.35(1/4)
22/25/35	Liquid	6.35(1/4)	6.35(1/4)

The standard specifications apply only to the operation of the air conditioner under normal conditions.

Since operating conditions vary according to the areas where these units are installed, the following information has been provided to clarify the operating characteristics of the air conditioner under the conditions indicated by the performance curve.

(1) GUARANTEED VOLTAGE

198~264 V 50 Hz

(2) AIR FLOW

Air flow should be set at MAX.

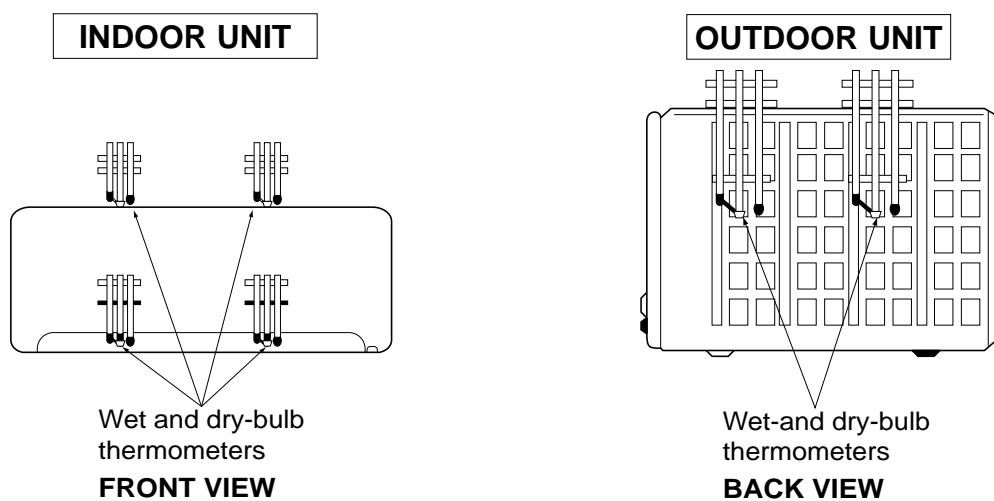

(3) MAIN READINGS

(1) Indoor intake air wet-bulb temperature :	°CWB	}	Cooling
(2) Indoor outlet air wet-bulb temperature :	°CWB		
(3) Outdoor intake air dry-bulb temperature :	°CDB	}	Heating
(4) Total input:	W		
(5) Indoor intake air dry-bulb temperature :	°CDB	}	Heating
(6) Outdoor intake air wet-bulb temperature :	°CWB		
(7) Total input :	W		

Indoor air wet/dry-bulb temperature difference on the left side of the following chart shows the difference between the indoor intake air wet/dry-bulb temperature and the indoor outlet air wet/dry-bulb temperature for your reference at service.

How to measure the indoor air wet-bulb/dry-bulb temperature difference

1. Attach at least 2 sets of wet-and dry-bulb thermometers to the indoor air intake as shown in the figure, and at least 2 sets of wet-and dry-bulb thermometers to the indoor air outlet. The thermometers must be attached to the position where air speed is high.
2. Attach at least 2 sets of wet-and dry-bulb thermometers to the outdoor air intake. Cover the thermometers to prevent direct rays of the sun.
3. Check that the air filter is cleaned.
4. Open windows and doors of room.
5. Press the EMERGENCY OPERATION switch once (twice) to start the EMERGENCY COOL (HEAT) MODE.
6. When system stabilizes after more than 15 minutes, measure temperature and take an average temperature.
7. 10 minutes later, measure temperature again and check that the temperature does not change.

3. 35-class unit in single operation

10-3. Test run operation (How to operate fixed-frequency operation)

1. Press EMERGENCY OPERATION switch to COOL or HEAT mode (COOL : Press once, HEAT : Press twice).
2. Test run operation starts and continues to operate for 30 minutes.
3. Compressor operates at rated frequency.
4. Indoor fan operates at High speed.
5. After 30 minutes, test run operation finishes and EMERGENCY OPERATION starts (Operation frequency of compressor varies).
6. To cancel test run operation (EMERGENCY OPERATION), press EMERGENCY OPERATION switch or any button on remote controller.

10-4. Outdoor low pressure and outdoor unit current (single operation)

NOTE: The unit of pressure has been changed to MPa on the international system of units (SI unit system).

The conversion factor is : 1 (MPa[Gauge]) = 10.2(kgf/cm² [Gauge])

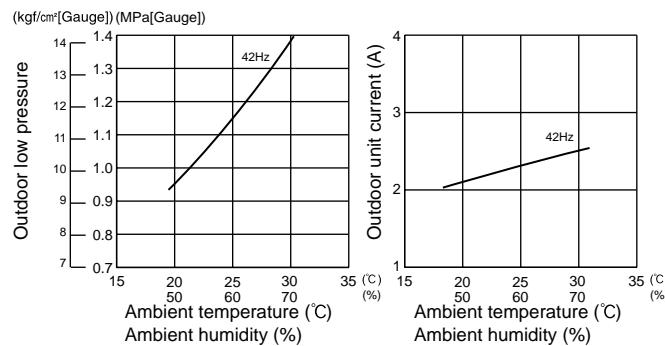

(1) COOL operation

- ① Both indoor and outdoor unit are under the same temperature/humidity condition.
- ② Operation : TEST RUN OPERATION (Refer to 10-3.)

12-1. Locking the operation mode of the conditioner (COOL, DRY, HEAT)

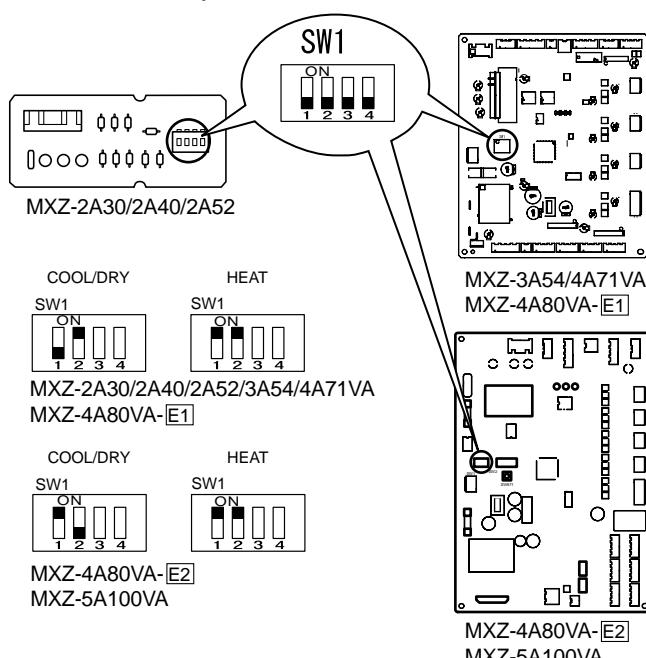

Description of the function:

With this function, you can lock the operation mode of the outdoor unit. Once the operation mode is locked to either COOL/DRY mode or HEAT mode, the air conditioner operates in that mode only.

Initial setting is required to activate this function. Please explain about this function to your customers and ask them whether they want to use it.

[How to lock the operation mode]

- ① Turn OFF the power supply for the air conditioner before making the setting.
- ② Set SW1 on the display P.C. board or the outdoor electronic control P.C. board as shown in the right figure.
- ③ Turn ON the power supply for the air conditioner.

12-2. Lowering the operating noise of the outdoor unit

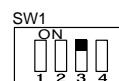

Description of the function:

With this function, you can lower the operating noise of the outdoor unit when the operation load is small, for example, during nighttime in COOL mode. However, please note that the cooling and heating capacity can also be lowered if this function is activated.

Initial setting is required to activate this function. Please explain about this function to your customers and ask them whether they want to use it.

[How to lower the operating noise]

- ① Turn OFF the power supply for the air conditioner before making the setting.
- ② Set the 3rd Dip Switch of SW1 on the display P.C. board or the outdoor electronic control P.C. board to ON to enable this function.
- ③ Turn ON the power supply for the air conditioner.

12-3. Pre-heat control <MXZ-2A, MXZ-3A54VA-E4, E5, E6, MXZ-4A71VA-E4, E5, E6, MXZ-4A80VA-E2, MXZ-5A100VA>

If moisture gets into the refrigerant cycle, or when refrigerant is liquefied and collected in the compressor, it may interfere with the start-up of the compressor.

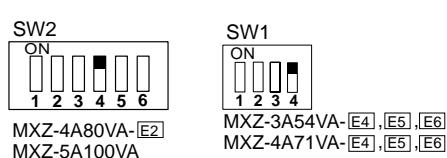

To improve start-up condition, the compressor is energized even while it is not operating. This is to generate heat at the winding.

The compressor uses about 50 W when pre-heat control is turned ON.

Pre-heat control is ON at initial setting.

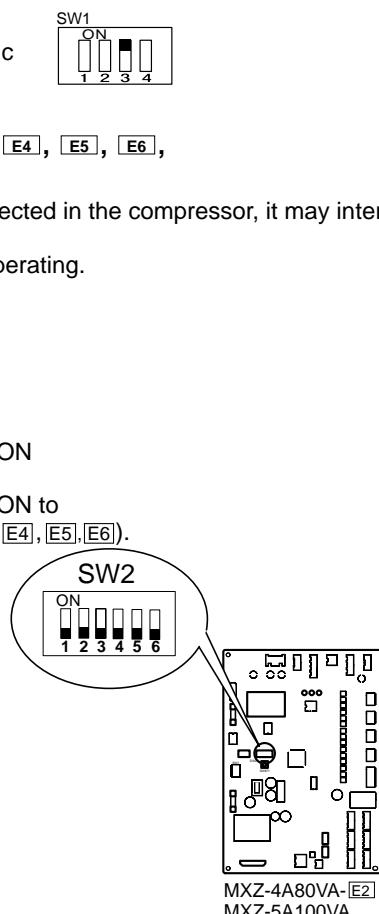

[How to deactivate pre-heat control]

- ① Turn OFF the power supply for the air conditioner before making the setting.
- ② Set the 4th Dip Switch of SW2 on the outdoor electronic control P.C. board to ON to deactivate pre-heat control function (MXZ-4A80VA-E2, MXZ-5A100VA).
- Set the 4th Dip Switch of SW1 on the outdoor electronic control P.C. board to ON to deactivate pre-heat control function (MXZ-3A54VA-E4, E5, E6, MXZ-4A71VA-E4, E5, E6).
- Cut the JK wire of the inverter P.C. board to deactivate pre-heat control function (MXZ-2A).

- ③ Turn ON the power supply for the air conditioner.

NOTE: Pre-heat control will be turned OFF when the breaker is turned OFF.

12-4. Auto line correcting

Outdoor unit has an auto line correcting function which automatically detects and corrects improper wiring or piping.

<MXZ-2A>

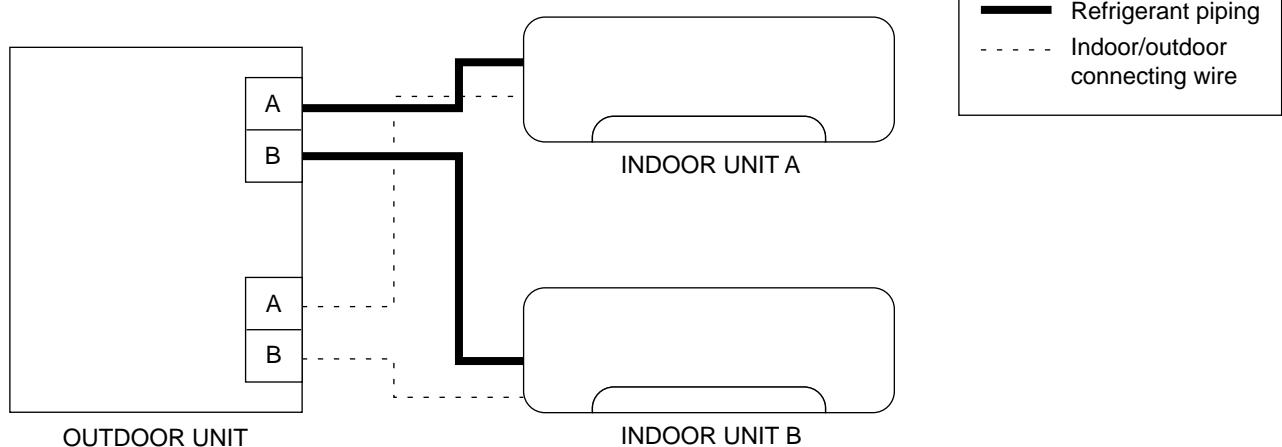

Improper wiring or piping can be automatically detected when one indoor unit is operated in COOL mode for 30 minutes. When improper wiring or piping is detected, wiring lines are corrected (A to B/ B to A) with the software.

NOTE:

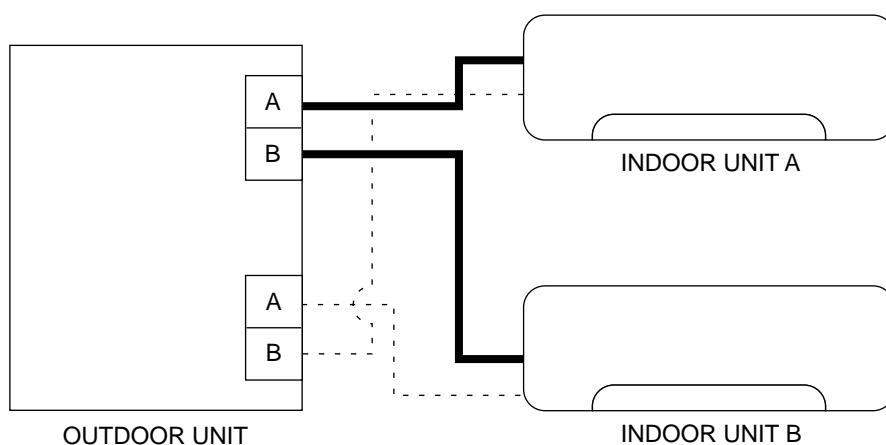

This function may not work due to the condition or environment of the unit, such as the following:

- gas leak, closed stop valve
- unit failure such as defective LEV
- indoor/outdoor temperature

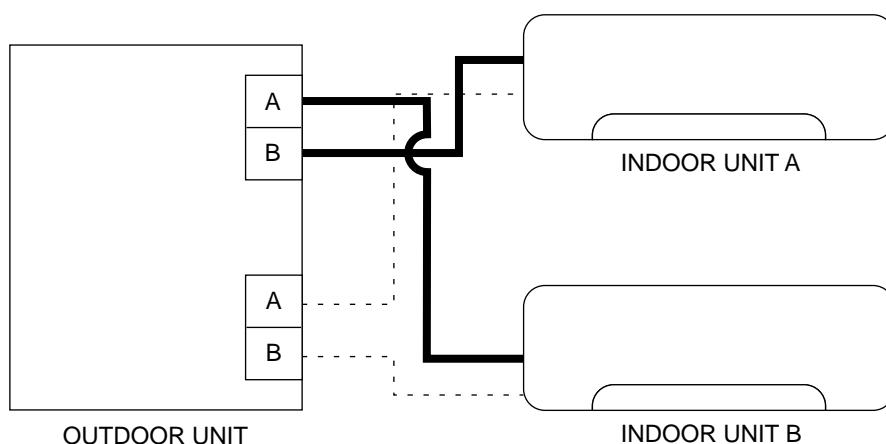

<Correct line>

<Incorrect wiring>

<Incorrect piping>

The record of auto line correcting can be confirmed in the following way:

- ① Turn OFF the power supply.
- ② Turn ON the 4th Dip Switch of SW1 on the display P.C. board.
- ③ Turn ON the power supply.
- ④ Confirm the correction by the blinking of LED.

Number of blinks		Wiring line
LED1 (Red)	LED2 (Yellow)	
Once	Once	Not corrected
3 times	3 times	Corrected

- ⑤ Turn OFF the power supply after the confirmation, and turn OFF the 4th Dip Switch of SW1 on the display P.C. board.
- ⑥ Turn ON the power supply.

NOTE: This function does not work when the jumper wire JGO on the inverter P.C. board is cut.

<MXZ-4A80VA- E2, MXZ-5A100VA>

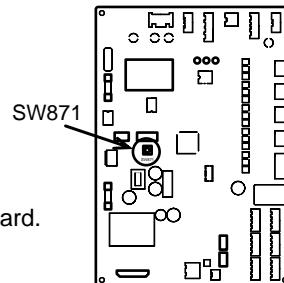

Improper wiring or piping can be automatically detected by pressing the piping/wiring correction switch (SW871).

When improper wiring or piping is detected, wiring lines are corrected.

This will be completed in about 10 to 15 min.

[How to activate this function]

1. Check that outside temperature is above 0°C .
(This function does not work when outside temperature is not above 0°C.)
2. Check that the stop valves of the liquid pipe and gas pipe are open.
3. Check that the wiring between indoor and outdoor unit is correct.
(If the wiring is not correct, this function does not work.)
4. Turn ON the power supply and wait at least 1 minute.
5. Press the piping/wiring correction switch (SW871) on the electronic control P.C. board.
Do not touch energized parts.

LED indication during detection:

LED1(Red)	LED2(Yellow)	LED3(Green)	
Lighting	Lighting	Blinking	

LED indication after detection:

LED1(Red)	LED2(Yellow)	LED3(Green)	Indication
Lighting	Goes out	Lighting	Completed (Detected successfully)
Blinking	Blinking	Blinking	Cannot be corrected
Other indications			Refer to "SAFETY PRECAUTIONS WHEN LED FLASHES" located behind the service panel.

*Be sure to check for closed valves, cracked pipes or clogged pipes.

6. Press the switch to cancel.

LED indication after cancel:

LED1(Red)	LED2(Yellow)	LED3(Green)
Lighting	Lighting	Goes Out

NOTE: Indoor unit cannot be operated while this function is activated.

When this function is activated while indoor unit is operating, the operation will be stopped.

Operate indoor unit after the auto line correcting is finished.

Pressing the switch during detection cancels this function.

The record of auto line correcting can be confirmed in the following way:

Press the switch for more than 5 sec.

LED will show the record of auto correcting for about 30 sec. as shown in the table below:

Number of blinks			Wiring line
LED1(Red)	LED2(Yellow)	LED3(Green)	
Once	Once	Lighting	Not corrected
3 times	3 times	Lighting	Corrected

NOTE: Activate this function to confirm the correct wiring after replacing the electronic control P.C. board.

(Previous records are deleted when the electronic control P.C. board is replaced.)

The record cannot be shown if auto line correcting is not canceled (Refer to "How to activate this function").

12-5. Increasing maximum compressor operational frequency and fan speed of the outdoor unit <MXZ-4A80VA- E2, MXZ-5A100VA>

Compressor operational frequency and fan speed can be increased.

Capacity of the unit can be improved with this function.

NOTE:

Compressor operational frequency may not be increased under primary current restriction or high pressure protection.

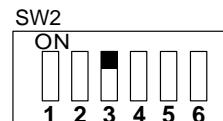

Compressor operational frequency will not be increased when 1 or 2 indoor units are operating.

This function doesn't work when the function which lowers the operating noise of the outdoor unit is activated.

Noise level of the outdoor unit will increase (You may need to explain this to your customers.)

[How to increase maximum compressor operational frequency and fan speed]

- ① Turn OFF the power supply for the air conditioner before making the setting.
- ② Set the 3rd Dip Switch of SW2 on the outdoor electronic control P.C. board to ON to enable this function.
- ③ Turn ON the power supply for the air conditioner.

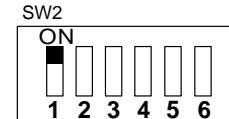

12-6. Changing defrost finish temperature and heat operation time <MXZ-4A80VA- E2, MXZ-5A100VA>

If defrosting operation starts more than necessary, the defrost finish temperature and heat operation time can be changed. The number of defrosting operation and defrosting time can be reduced with this function.

	Initial setting	Changed
Defrost finish temperature (°C)	10	5
Heat operation time (min.)	31	40

[How to change defrost finish temperature and heat operation time]

- ① Turn OFF the power supply for the air conditioner before making the setting.
- ② Set the 1st Dip Switch of SW2 on the outdoor electronic control P.C. board to ON to enable this function.
- ③ Turn ON the power supply for the air conditioner.

12-7. Changing the ampere limit <MXZ-4A80VA- E2, MXZ-5A100VA>

With this function, you can change the current that flows in the outdoor unit.

NOTE:

Use this function only when the amount of current exceeds the allowed value.

[How to change the ampere limit]

- ① Be sure to turn OFF the power supply for the air conditioner before making the setting.
- ② Make the setting referring to the table on the right.
- ③ Turn ON the power supply for the air conditioner.

SW 2	MXZ-4A80VA - E2 MXZ-5A100VA

13-1. Cautions on troubleshooting

1. Before troubleshooting, check the following:

- 1) Check the power supply voltage.
- 2) Check the indoor/outdoor connecting wire for miswiring.

2. Take care of the following during servicing

- 1) Before servicing the air conditioner, be sure to turn OFF the unit first with the remote controller, and after confirming the horizontal vane is closed, turn OFF the breaker and/or disconnect the power plug.
- 2) Be sure to turn OFF the power supply before removing the front panel, the cabinet, the top panel, and the electronic control P.C. board.
- 3) When removing the electrical parts, be careful to the residual voltage of smoothing capacitor.
- 4) When removing the electronic control P.C. board, hold the edge of the board with care NOT to apply stress on the components.
- 5) When connecting or disconnecting the connectors, hold the housing of the connector. DO NOT pull the lead wires.

3. Troubleshooting procedure

- 1) First, check if the OPERATION INDICATOR lamp on the indoor unit is flashing on and off to indicate an abnormality. To make sure, check how many times the abnormality indication is flashing on and off before starting service work.
- 2) If the electronic control P.C. board seems to be defective, check the copper foil pattern for disconnection and the components for bursting and discoloration.
- 3) Refer to 13-2, and 13-3 and 13-4.

13-2. Failure mode recall function

This air conditioner can memorize the abnormal condition which has occurred once.

Even though LED indication listed on the troubleshooting check table (13-4) disappears, the memorized failure details can be recalled.

This mode is very useful when the unit needs to be repaired for the abnormality which doesn't recur.

1. Type of failure mode recall function

There are 2 types in failure mode recall function as shown below.

- ① Indoor and outdoor unit failure mode recall function
With this function, failure mode of indoor unit and a part of failure mode of outdoor unit can be recalled.
- ② The details of outdoor unit failure mode recall function
With this function, more detailed failure mode of outdoor unit can be recalled.

Refer to the service manual of indoor unit for how to recall the failure mode and the details of indoor unit failure mode.

The outdoor unit failure mode is indicated by the operation indicator lamp on the indoor unit and the LED of outdoor unit. See "13-2.2. Outdoor unit failure mode table".

2. Outdoor unit failure mode table

13				Gas pipe temperature thermistor C		
14				Gas pipe temperature thermistor D		
15		Lighting	11 times	Communication error between P.C. boards	Communication error occurs twice between the outdoor electronic control P.C. board and power board for more than 10 seconds.	<ul style="list-style-type: none"> • Check the connecting wire between outdoor electronic control P.C. board and power board. • Check the connecting wire among outdoor electronic control P.C. board, noise filter P.C. board and power board.
16		Lighting	12 times	Zero cross detecting circuit	The protection stop of the zero cross detecting circuit is continuously performed 10 times.	<ul style="list-style-type: none"> • Check the connecting wire between outdoor electronic control P.C. board and power board. • Check the connecting wire among outdoor electronic control P.C. board, noise filter P.C. board and power board.
17				IPM protection	Overcurrent is detected after 30 minutes of compressor start-up.	<ul style="list-style-type: none"> • Reconnect compressor connector. • Refer to 13-6.⑯ "How to check inverter/compressor". • Check the stop valve. • Check the power module (PAM module).
18		Lighting	13 times	Lock protection	Overcurrent is detected within 30 minutes of compressor start-up	<ul style="list-style-type: none"> • Check the amount of gas and refrigerant circuit. • Refer to 13-6.⑰ "Check of LEV".
19				Discharge temperature protection	Discharge temperature exceeds 116°C during operation. Compressor can restart if discharge temperature thermistor reads 100°C or less 3 minutes later.	
20		Lighting	14 times	Fin temperature protection	The fin temperature exceeds 89°C during operation.	<ul style="list-style-type: none"> • Check refrigerant circuit and refrigerant amount. • Refer to 13-6.⑱ "Check of outdoor fan motor".
21				P.C. board temperature protection	The P.C. board temperature exceeds 73°C (MXZ-3A54VA, MXZ-4A71VA)/ 87°C (MXZ-4A80VA, MXZ-5A100VA) during operation.	
22		Lighting	15 times	High-pressure protection	High-pressure is detected with the high-pressure switch (HPS) during operation. (MXZ-4A80VA, MXZ-5A100VA)	<ul style="list-style-type: none"> • Check the amount of gas and the refrigerant circuit. • Check the stop valve.
23					The outdoor heat exchanger temperature exceeds 70°C during cooling or indoor gas pipe temperature exceeds 70°C during heating.	
24		Lighting	16 times	Converter protection	A failure is detected in the operation of the converter during operation.	<ul style="list-style-type: none"> • Replace the power board.
25		Lighting	17 times	Bus-bar voltage protection (1)	The bus-bar voltage exceeds 400 V or falls to 200 V or below during compressor operating.	<ul style="list-style-type: none"> • Replace the power board.
26				Bus-bar voltage protection (2)	The bus-bar voltage exceeds 400 V (MXZ-3A54VA, MXZ-4A71VA)/ 430 V (MXZ-4A80VA, MXZ-5A100VA) or falls to 50 V or below during compressor operating.	
27		Lighting	18 times	Outdoor fan motor	Failure occurs continuously three times within 30 seconds after the fan gets started.	<ul style="list-style-type: none"> • Refer to 13-6.⑲ "Check of outdoor fan motor".
28		Lighting	19 times	Current sensor protection	A short or open circuit is detected in the current sensor during compressor operating.	<ul style="list-style-type: none"> • Replace the power board.
29		Lighting	20 times	Communication protection between P.C. boards	Communication error occurs between the outdoor electronic control P.C. board and power board for more than 10 seconds.	<ul style="list-style-type: none"> • Check the connecting wire between outdoor electronic control P.C. board and power board.
30		Lighting	21 times	Zero cross detecting circuit protection	Zero cross signal cannot be detected while the compressor is operating.	<ul style="list-style-type: none"> • Check the connecting wire among outdoor electronic control P.C. board, noise filter P.C. board and power board.

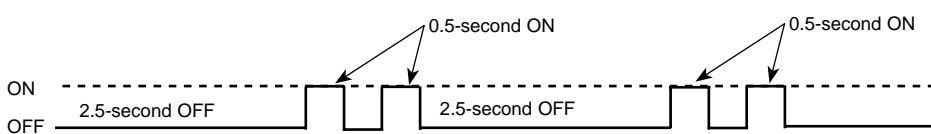

No.	Symptom	Indication		Abnormal point / Condition	Condition	Correspondence
		LED1(Red)	LED2(Yellow)			
21	Outdoor unit operates.	Once	Lighting	Primary current protection	The input current exceeds 15 A (MXZ-3A54VA, MXZ-4A71VA)/17 A (MXZ-4A80VA)/18 A (MXZ-5A100VA).	These symptoms do not mean any abnormality of the product, but check the following points. • Check if indoor filters are clogged. • Check if refrigerant is short. • Check if indoor/outdoor unit air circulation is short cycled.
				Secondary current protection	The current of the compressor exceeds 12 A (MXZ-3A54VA, MXZ-4A71VA)/10 A (MXZ-4A80VA, MXZ-5A100VA).	
		Twice	Lighting	High-pressure protection	The indoor gas pipe temperature exceeds 45°C during heating.	
				Defrosting in cooling	The indoor gas pipe temperature falls 3°C or below during cooling.	
		3 times	Lighting	Discharge temperature protection	The discharge temperature exceeds 100°C during operation.	• Check refrigerant circuit and refrigerant amount. • Refer to 13-6.⑩ "Check of LEV". • Refer to 13-6.⑪ "Check of outdoor thermistors".
		4 times	Lighting	Low discharge temperature protection	The frequency of the compressor is kept 80 Hz or more and the discharge temperature is kept under 50°C (COOL mode)/40°C (HEAT mode) for more than 40 minutes.	• Refer to 13-6.⑩ "Check of LEV". • Check refrigerant circuit and refrigerant amount.
25	Outdoor unit operates normally.	5 times	Lighting	Cooling high-pressure protection	The outdoor heat exchanger temperature exceeds 58°C during operation.	This symptom does not mean any abnormality of the product, but check the following points. • Check if indoor filters are clogged. • Check if refrigerant is short. • Check if indoor/outdoor unit air circulation is short cycled.
26		9 times	Lighting	Inverter check mode	The unit is operated with emergency operation switch.	—
27		Lighting	Lighting	Normal	—	—

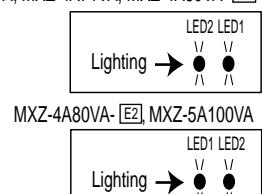

NOTE 1. The location of LED is illustrated at the right figure. Refer to 13-7.2.

2. LED is lighted during normal operation.

The flashing frequency shows the number of times the LED blinks after every 2.5-second OFF.
(Example) When the flashing frequency is "2".

CN912	Power P.C. board	Noise filter P.C. board
CN781	_____	Outdoor electronic control P.C. board
CN933	Inverter P.C. board	_____

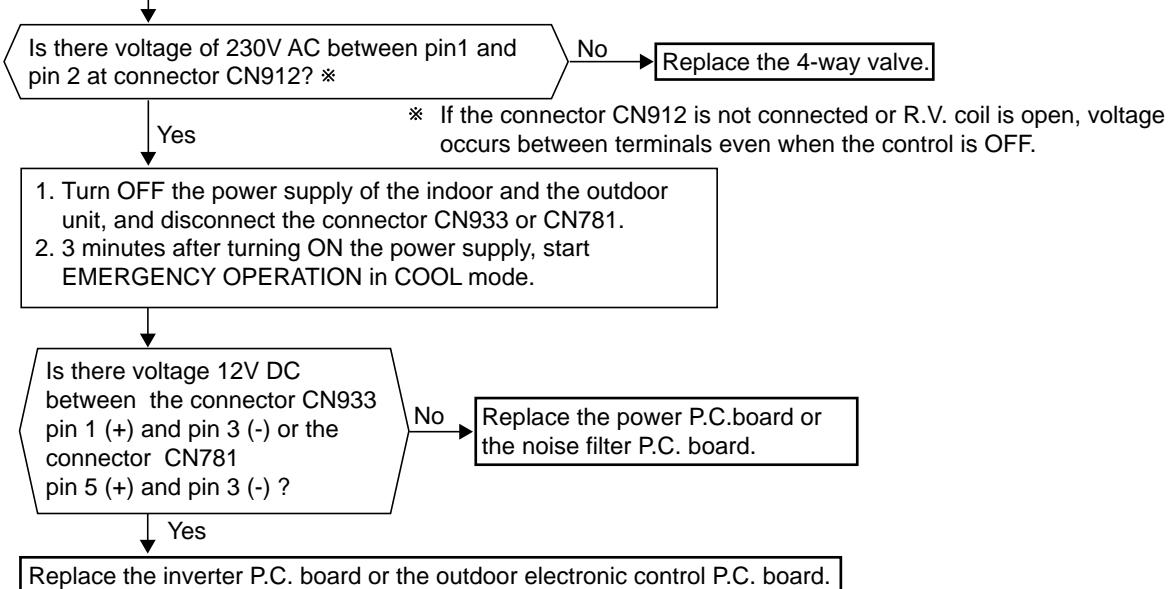

• When heating operation does not work.

1. Disconnect the lead wire leading to the compressor.
2. 3 minutes after turning ON the power supply, start EMERGENCY OPERATION in HEAT mode.

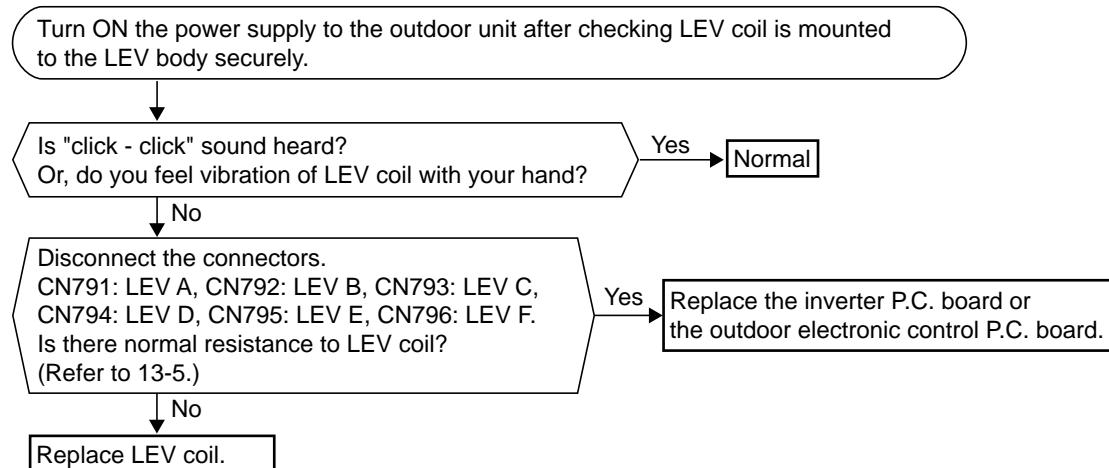

• When cooling operation does not work.

1. Disconnect the lead wire leading to the compressor.
2. 3 minutes after turning ON the power supply, start EMERGENCY OPERATION in COOL mode.

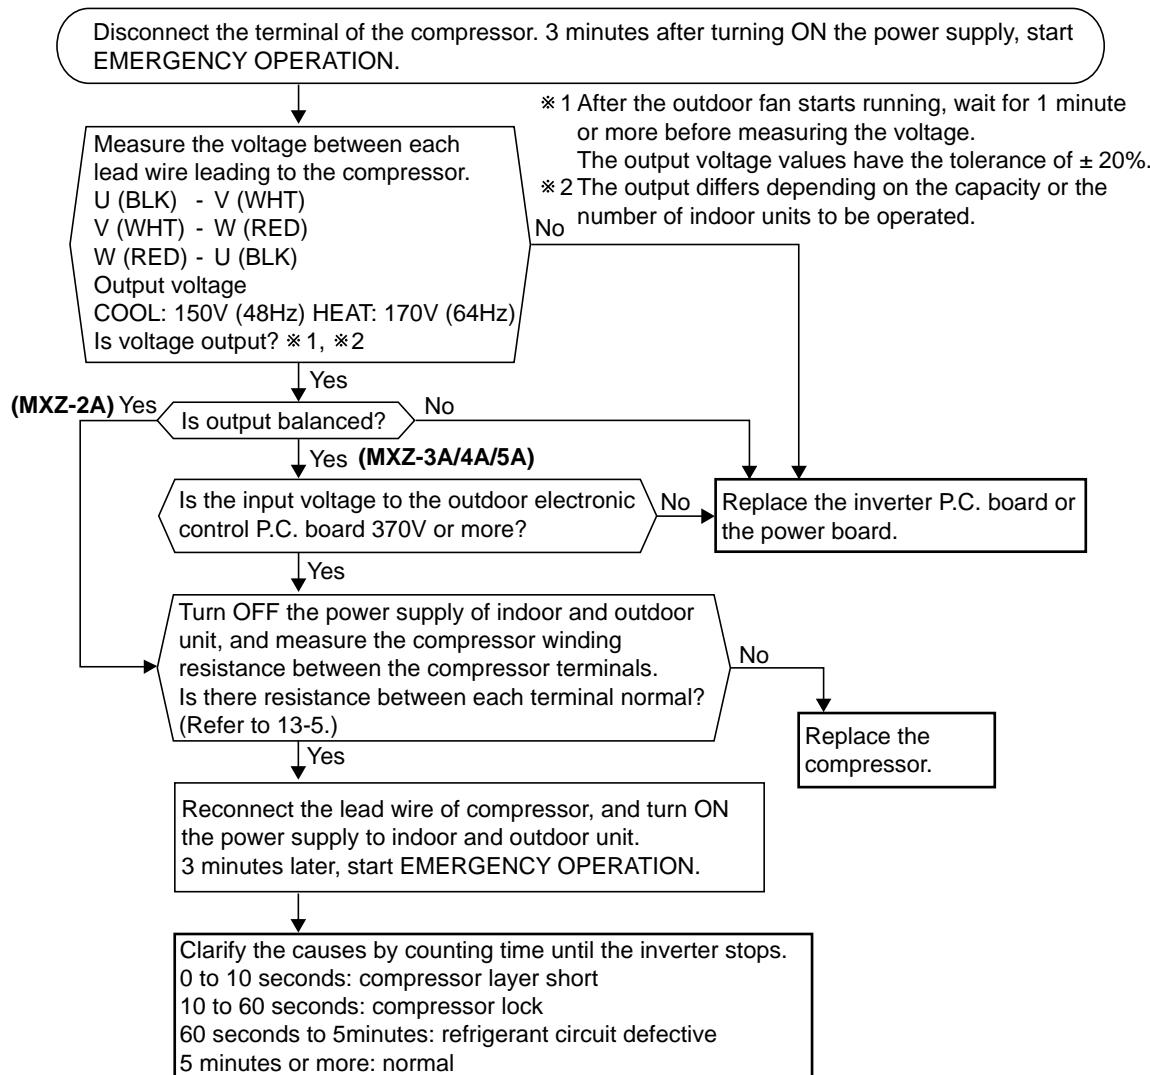

- When cooling, heat exchanger of non-operating indoor unit frosts.
- When heating, non-operating indoor unit gets warm.

④ Check of LEV

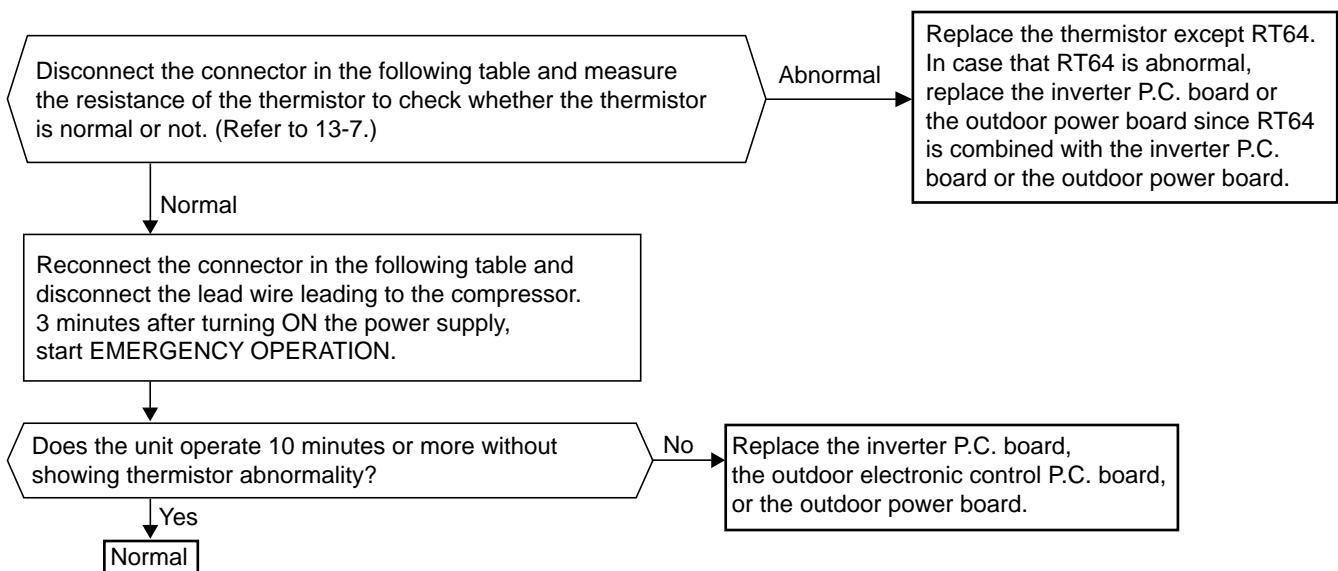

- When heating, room does not get warm.
- When cooling, room does not get cool.

(E) How to check inverter/ compressor

- When thermistor is abnormal.

(F) Check of outdoor thermistors

MXZ-2A30/2A40/2A52

- Fan motor does not operate or stops operating shortly after starting the operation.

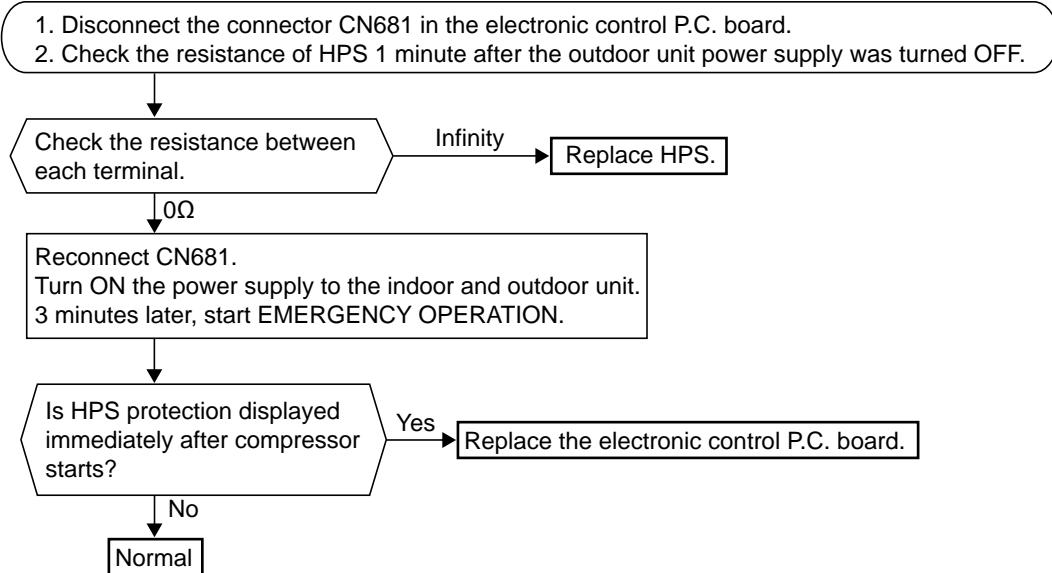

⑥ Check of outdoor fan motor

- When the operation frequency does not go up from lowest frequency.

(H) Check of HPS

MXZ-4A80VA/5A100VA

(I) The other cases

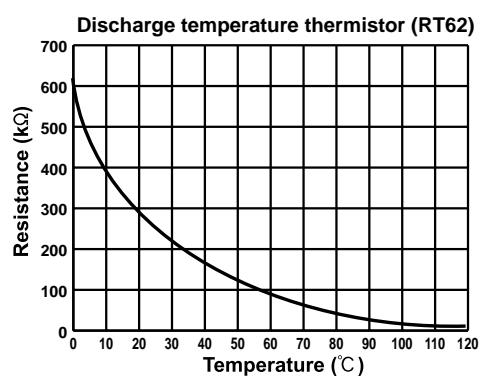

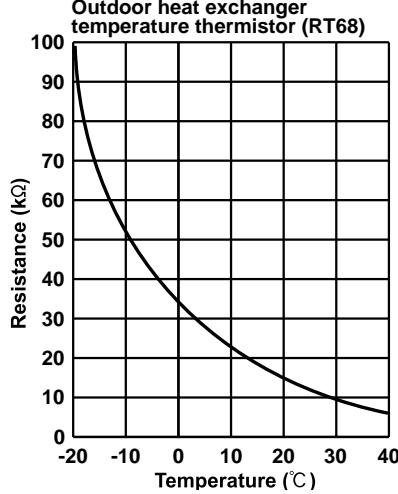

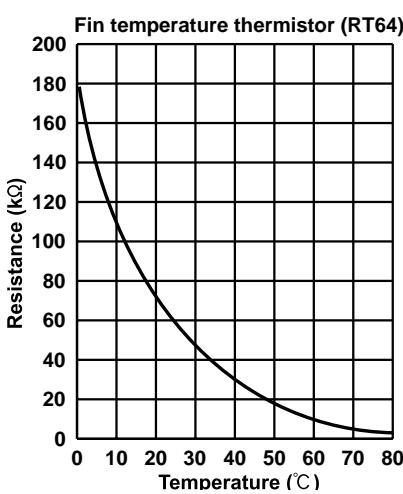

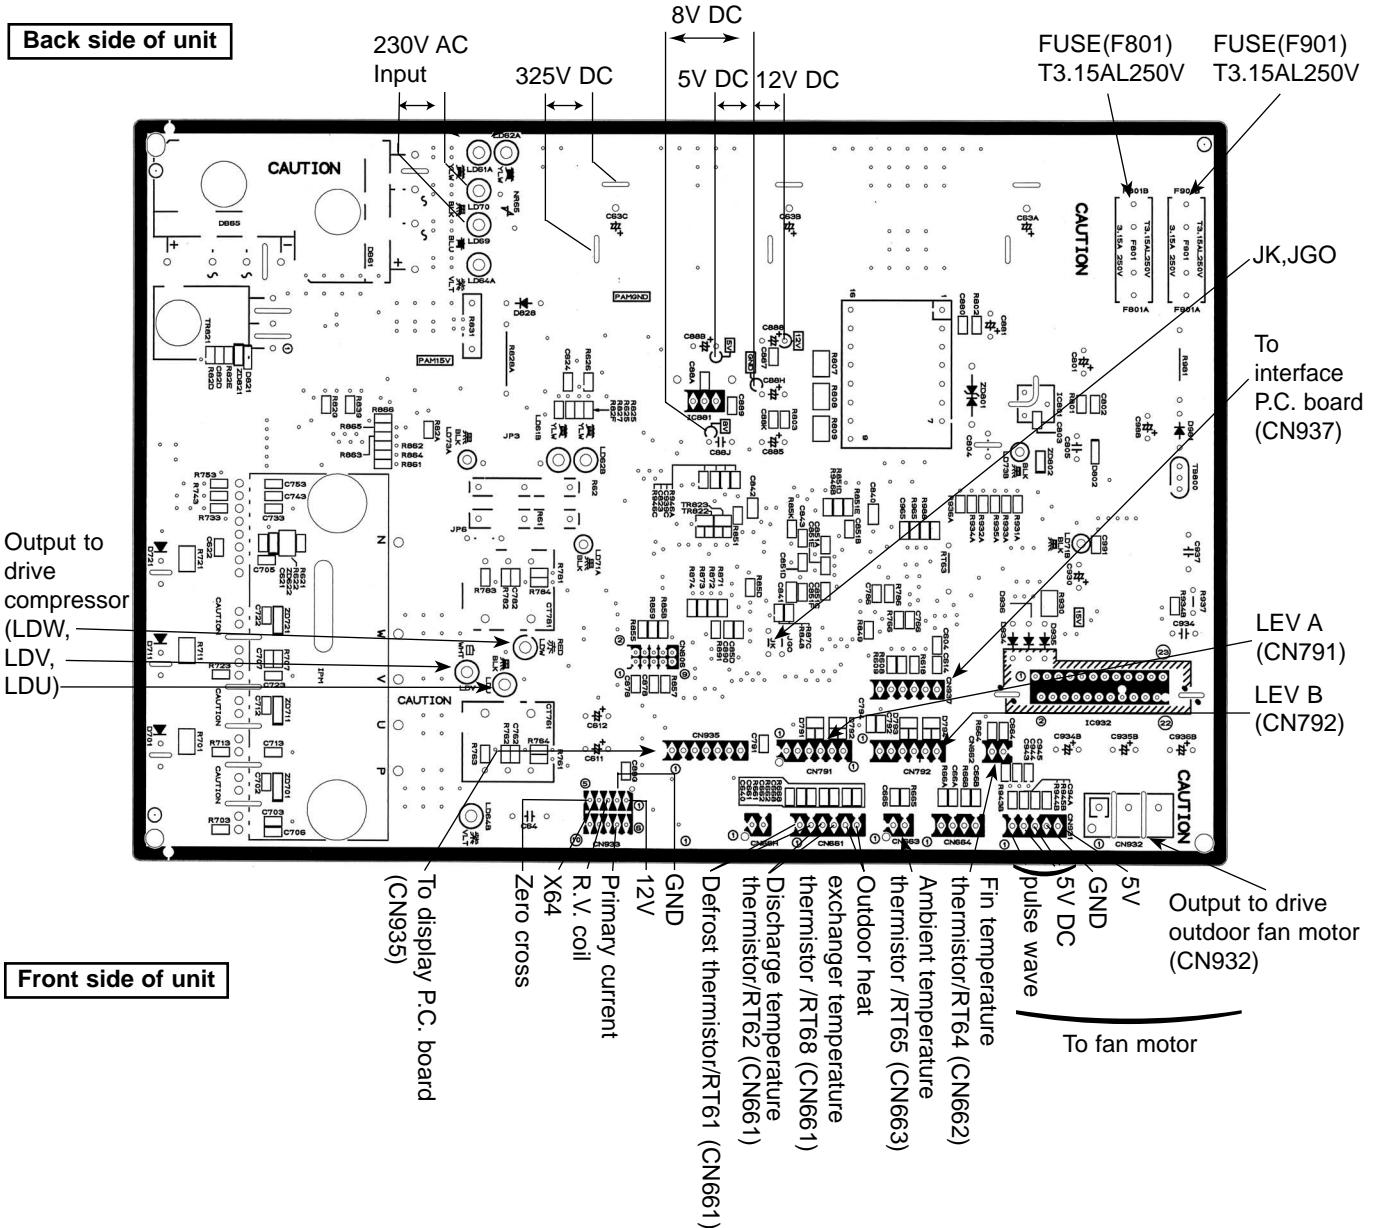

Indoor unit does not operate. (different operating models in multi system)

- When you try to run two indoor units simultaneously, one for cooling and the other for heating, the unit which transmits signal to the outdoor unit earlier decides the operation mode.
- When the above situation occurs, set all the indoor units to the same mode, turn OFF the indoor units, then turn them back ON.
- Though the top of the indoor unit sometimes gets warm, this does not mean malfunction. The reason is that the refrigerant gas continuously flows into the indoor unit even while it is not operating.

<"Terminal with locking mechanism" Detaching points>

The terminal which has the locking mechanism can be detached as shown below.
 There are two types (Refer to (1) and (2)) of the terminal with locking mechanism.
 The terminal without locking mechanism can be detached by pulling it out.
 Check the shape of the terminal before detaching.

- (1) Slide the sleeve and check if there is a locking lever or not.

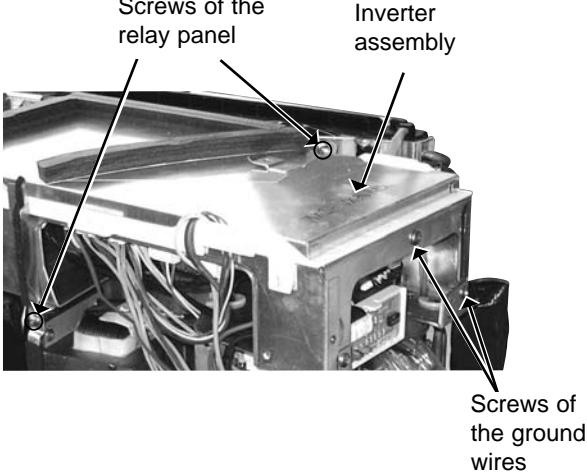

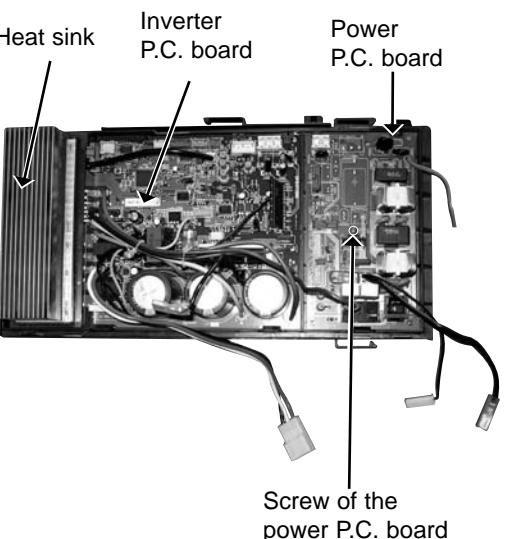

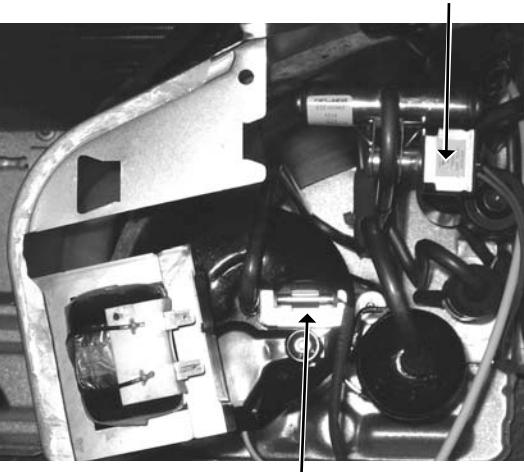

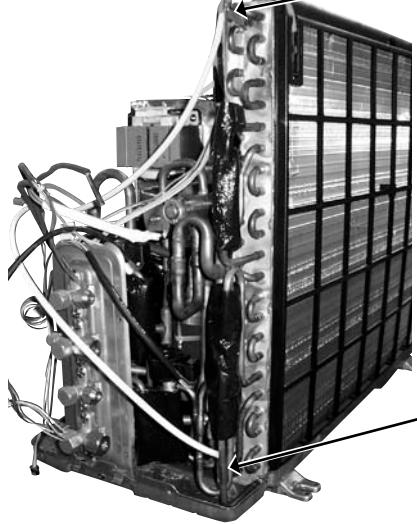

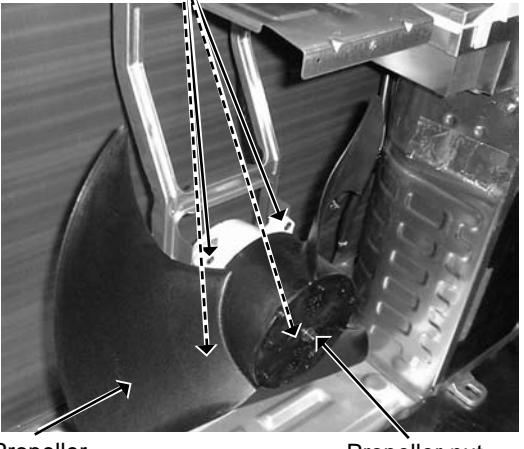

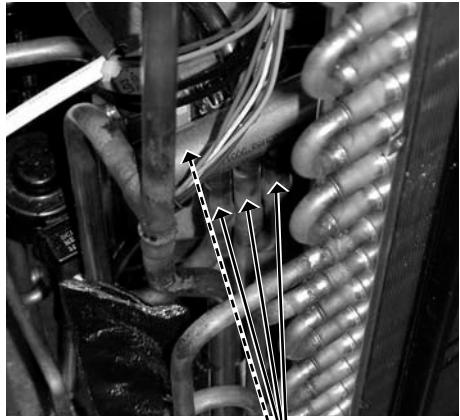

- (2) The terminal with this connector has the locking mechanism.
