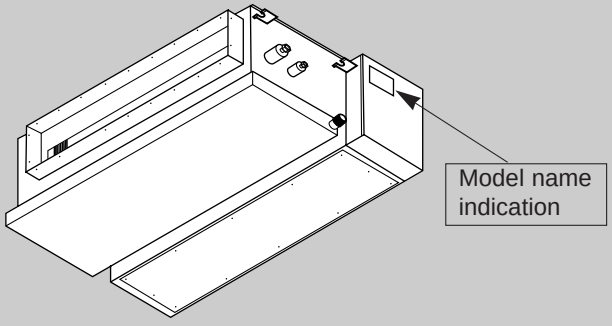
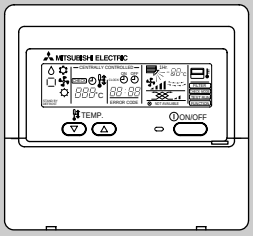
Revision :
• " **2. SPECIFICATIONS** " has been modified.

Note :
•This manual does not cover the following outdoor units. When servicing them, please refer to the service manual No.OC304 REVISED EDITION-A and this manual in a set.

• Please void OC303.



INDOOR UNIT



WIRED REMOTE CONTROLLER

CONTENTS

Mr.SLIM™

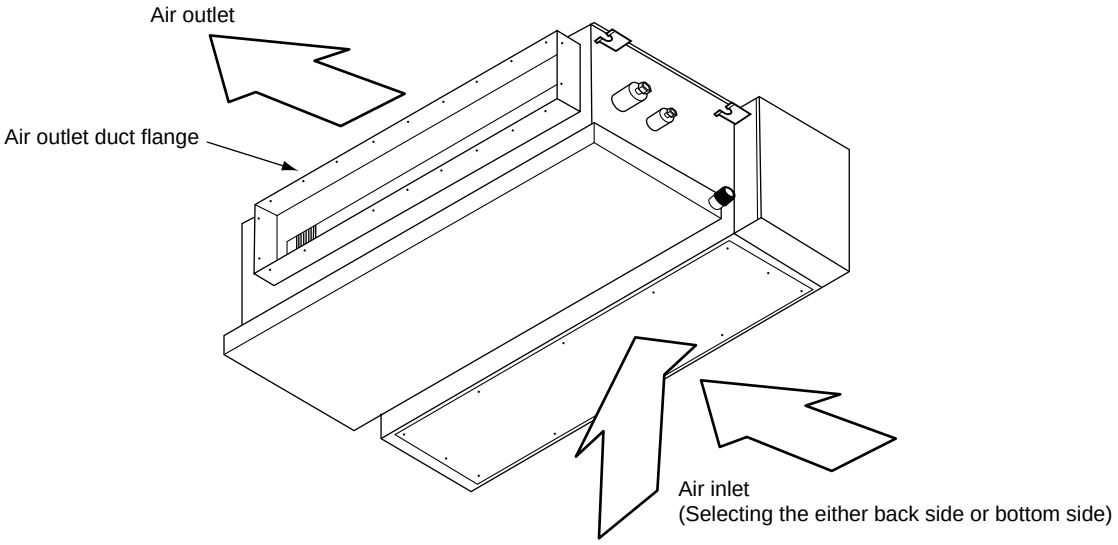
Revision:

" **2. SPECIFICATIONS** " has been modified on page 5 and 6.

Page	Revise point	Service Ref.	Incorrect	Correct
5	Electrical date	SEZ-A12AR.TH	33	48
5	Power input	SEZ-A18AR.TH	49	61
6	Rated frequency	SEZ-A24AR.TH	64	87

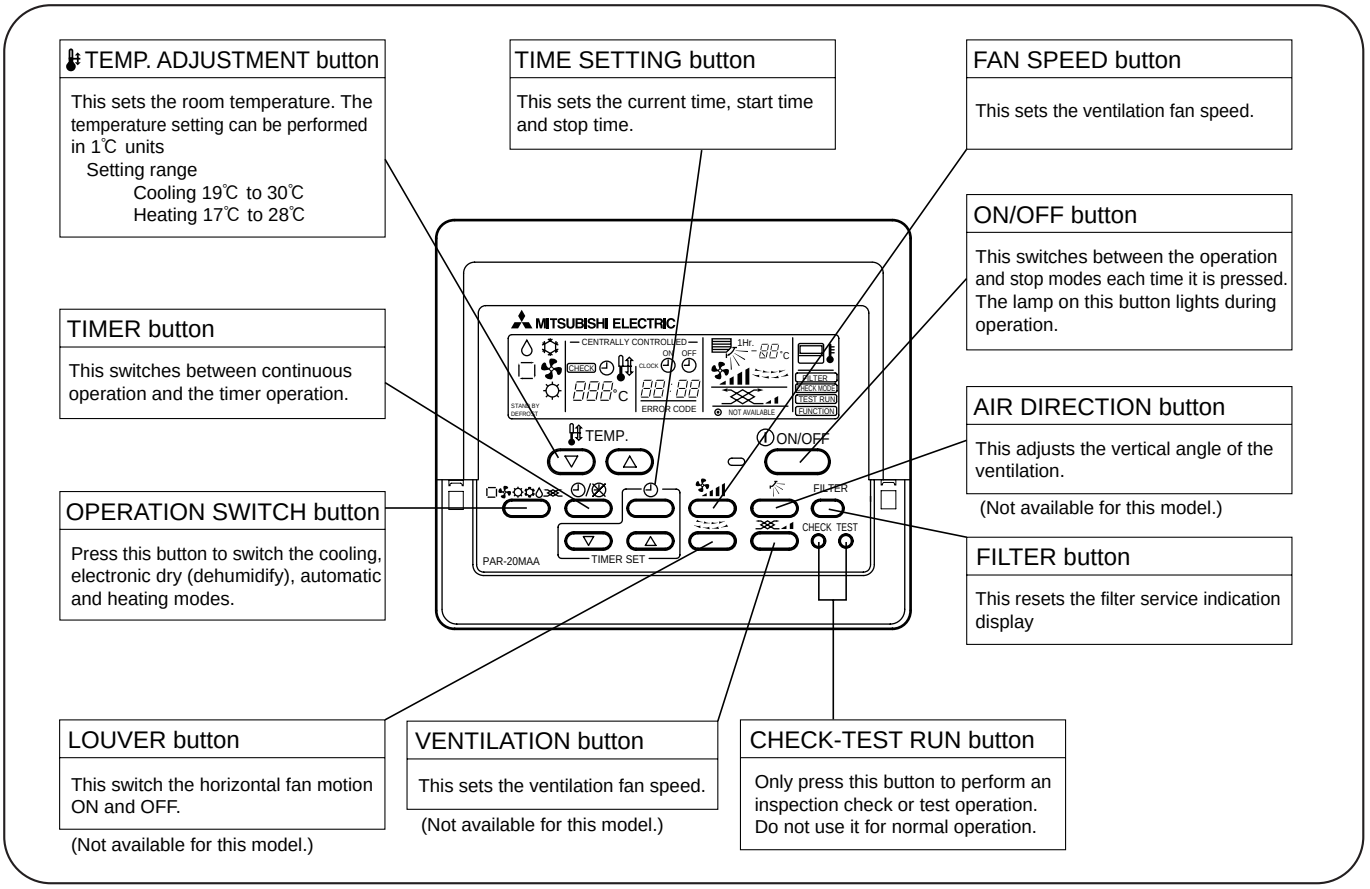
1 PART NAMES AND FUNCTIONS

Indoor Unit
SEZ-A12AR.TH
SEZ-A18AR.TH
SEZ-A24AR.TH

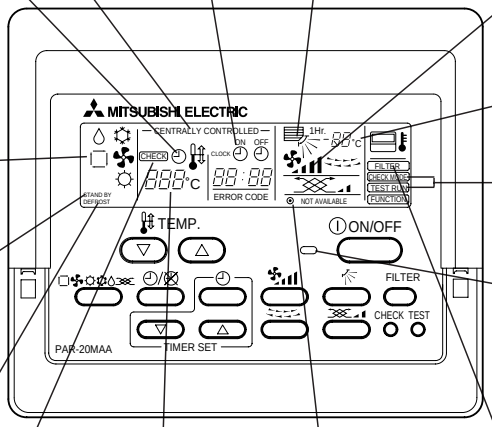


Wired remote controller
On the controls are set, the same operation mode can be repeated by simply pressing the ON/OFF button.

● **Operation buttons**



● Display



CENTRALLY CONTROLLED display

This indicates when the unit is controlled by optional features such as central control type remote controller.

CLOCK display

The current time , start time and stop time can be displayed in ten second intervals by pressing the time switch button. The start time or stop time is always displayed during the timer operation.

In this display example on the bottom left, a condition where all display lamps light is shown for explanation purposes although this differs from actual operation.

AIR DIRECTION display

This displays the air direction.

(Not available for this model.)

TIMER display

This indicates when the continuous operation and time operation modes are set.
It also display the time for the timer operation at the same time as when it is set.

AIR SPEED display

The selected fan speed is displayed.

ROOM TEMPERATURE display

The temperature of the suction air is displayed during operation. The display range is 8°C to 39°C. The display flashes 8°C when the actual temperature is less than 8°C and flashes 39°C when the actual temperature is greater than 39°C.

OPERATION MODE display

This indicates the operation mode.

STANDBY display

The [STANDBY] symbol is only displayed from the time the heating operation starts unit the heated air begins to blow.

Operation lamp

This lamp lights during operation, goes off when the unit stops and flashes when a malfunction occurs.

CHECK MODE / TEST RUN display

This display lights in the check mode or when a test operation is performed.

DEFROST display

This indicates when the defrost operation is performed.

FILTER display

This lamp lights when the filter need to be cleaned.

CHECK display

This indicates when a malfunction has occurred in the unit which should be checked.

SET TEMPERATURE display

This displays the selected setting temperature.

POWER display

This lamp lights when electricity is supplied to the unit.

Caution

- Only the Power display lights when the unit is stopped and power supplied to the unit.
- “NOT AVAILABLE” is displayed when the Air speed button are pressed.This indicates that this room unit is not equipped with the fan direction adjustment function and the louver function.
- When power is turned ON for the first time, it is normal that “H0” is displayed on the room temperature indication (For max. 2minutes). Please wait until this “H0” indication disappear then start the operation.

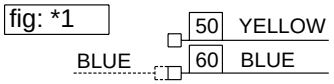
52C	COMPRESSOR CONTACTOR		

★ The 12V DC is NOT always against the ground. Terminal 3 has 12V DC against terminal N. However, between 3 and 2, these terminals are NOT electrically insulated by the transformer or other device.

NOTES:

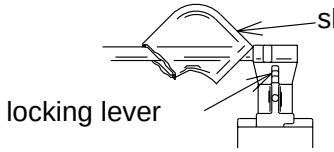
1.Since the indoor fan motor(MF) is connected with 50Hz power,if 60Hz power is used, change the wiring connection showing fig: *1
Indoor Fan Motor(MF) for 60Hz



2.About the outdoor side electric wiring refer to the outdoor unit electlic wiring diagram for servicing.
3.Use copper conductors only. (For field wiring)
4.Symbols below indicate.
◎ : Terminal block □□□ : Connector

How to remove the terminals shown at " ※ " mark.

" ※ " shows the terminals with a lock mechanism, so they cannot be removed when you pull the lead wire. Be sure to pull the wire by pushing the locking lever (projected part) of the terminal with a finger.



①Slide the sleeve.
②Pull the wire while pushing the locking lever.

5 REFRIGERANT SYSTEM DIAGRAM

6 TROUBLESHOOTING

6-1. Cautions on troubleshooting

(1) Before troubleshooting, check the followings:

① Check the power supply voltage.

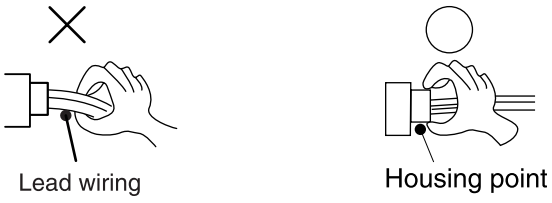
② Check the indoor/outdoor connecting wire for mis-wiring.

(2) Take care the followings during servicing.

① Before servicing the air conditioner, be sure to first turn off the remote controller to stop the main unit, and then turn off the breaker.

② When removing the indoor controller board, hold the edge of the board with care NOT to apply stress on the components.

③ When connecting or disconnecting the connectors, hold the housing of the connector. DO NOT pull the lead wires.



6-2. Self-check function

Wired remote controller

(1) Turn on the power.

(2) Press the [CHECK] button twice.

(3) Set refrigerant address with [TEMP] button if system control is used.

(4) Press the [ON/OFF] button to stop the self-check.

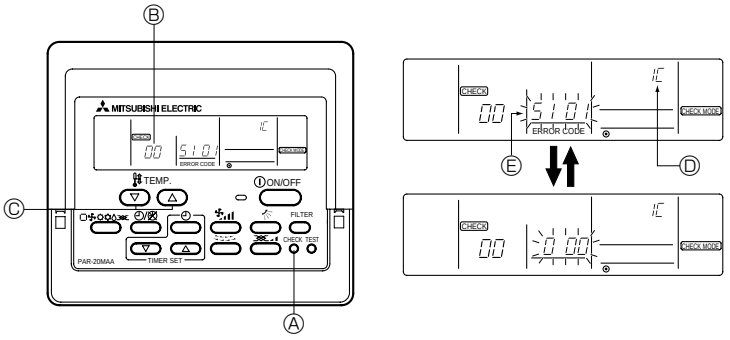
Ⓐ CHECK button

Ⓑ Refrigerant address

Ⓒ TEMP button

Ⓓ IC : Indoor unit
OC : Outdoor unit

Ⓔ Check code



• For description of each check code, refer to the following table.

① Check code	Symptom
5101	Room temperature thermistor error
5102	RT12, RT13, Outdoor thermistor error
2503	Drain sensor error
2502	Drain pump error
1503	Freezing safeguard operation
0405, 1501, 4210, 5102	Outdoor unit error
6831~6834	Signal error between remote controller and indoor units
6800	Communication error between indoor and outdoor units
– – – –	No alarm history
F F F F	No unit

• On wired remote controller

① Check code displayed in the LCD.

6-3. Trouble shooting

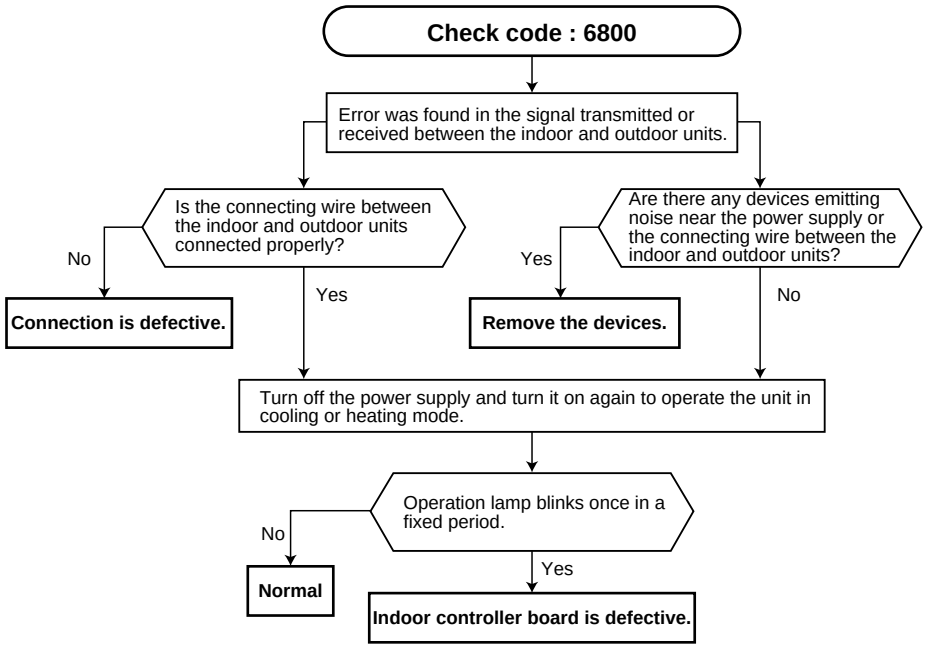
(1) In case of being indicated irregularity on the self diagnoses

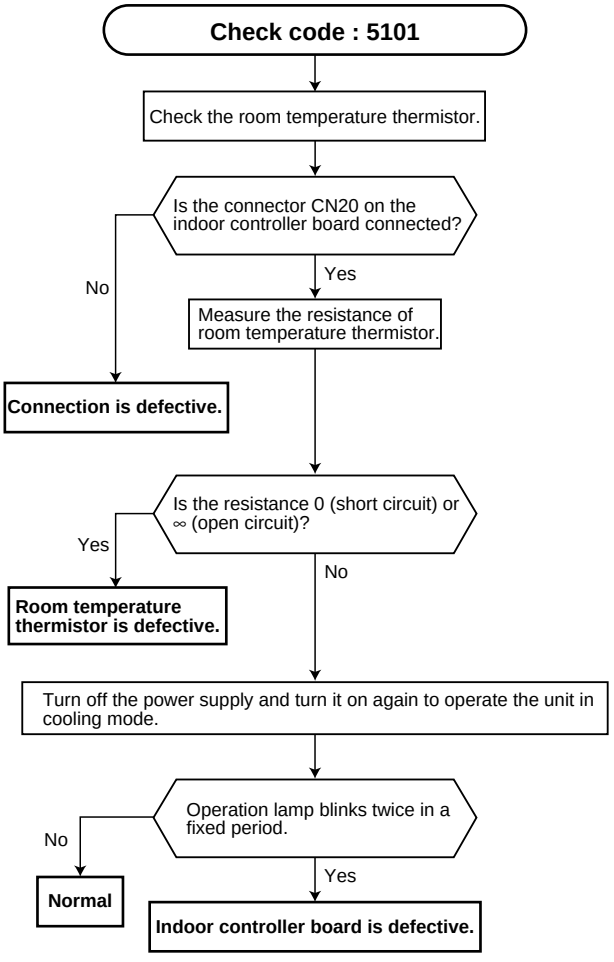
Check code	Phenomenon	Cause	Countermeasure
6800	Mis-wiring	Wiring between the indoor and outdoor is coming off.	Check the wiring out between the indoor and outdoor.
		Difference of wiring polarity between the indoor and outdoor.	
	Indoor-outdoor signal error	Trouble of the outdoor inverter P.C. board.	Check the outdoor inverter P.C. board. Refer to the TECHNICAL & SERVICE MANUAL of outdoor unit.
		Trouble of the Indoor controller board.	Exchange the Indoor controller board.
5102	Pipe temperature thermistor / Liquid.	Mis-connecting of the pipe temperature thermistor / Liquid.	Reinsert the connector (CN21).
		Trouble of the pipe temperature thermistor / Liquid.	Check the resistance value of the thermistor.
		Trouble of the Indoor controller board.	Exchange the Indoor controller board.
	Condenser / evaporator temperature thermistor	Mis-connecting of the condenser / evaporator temperature thermistor.	Reinsert the connector (CN29).
		Trouble of the condenser / evaporator temperature thermistor.	Check the resistance value of the thermistor.
		Trouble of the Indoor controller board.	Exchange the Indoor controller board.
	Outdoor thermistor	Mis-connecting of the outdoor thermistor.	Reinsert the connector.
		Trouble of the outdoor thermistor.	Check the resistance value of the thermistor.
		Trouble of the outdoor inverter P.C. board.	Exchange the outdoor inverter P.C. board.
5101	Room temperature thermistor	Mis-connecting of the room temperature thermistor.	Reinsert the connector (CN20).
		Trouble of the room temperature thermistor.	Check the resistance value of the thermistor.
		Trouble of the Indoor controller board.	Exchange the Indoor controller board.
1503	Freezing protection is working.	1) Short cycle of air cycle 2) Dirty air filter 3) Damaged fan 4) Abnormal refrigerant	1) Clear obstructions from air cycle. 2) Clean the air filter 3) Check the fan 4) Check the refrigerant temperature.
0405 1501 4210	Malfunction of outdoor unit	Malfunction of outdoor unit	Refer to the TECHNICAL & SERVICE MANUAL of outdoor unit.

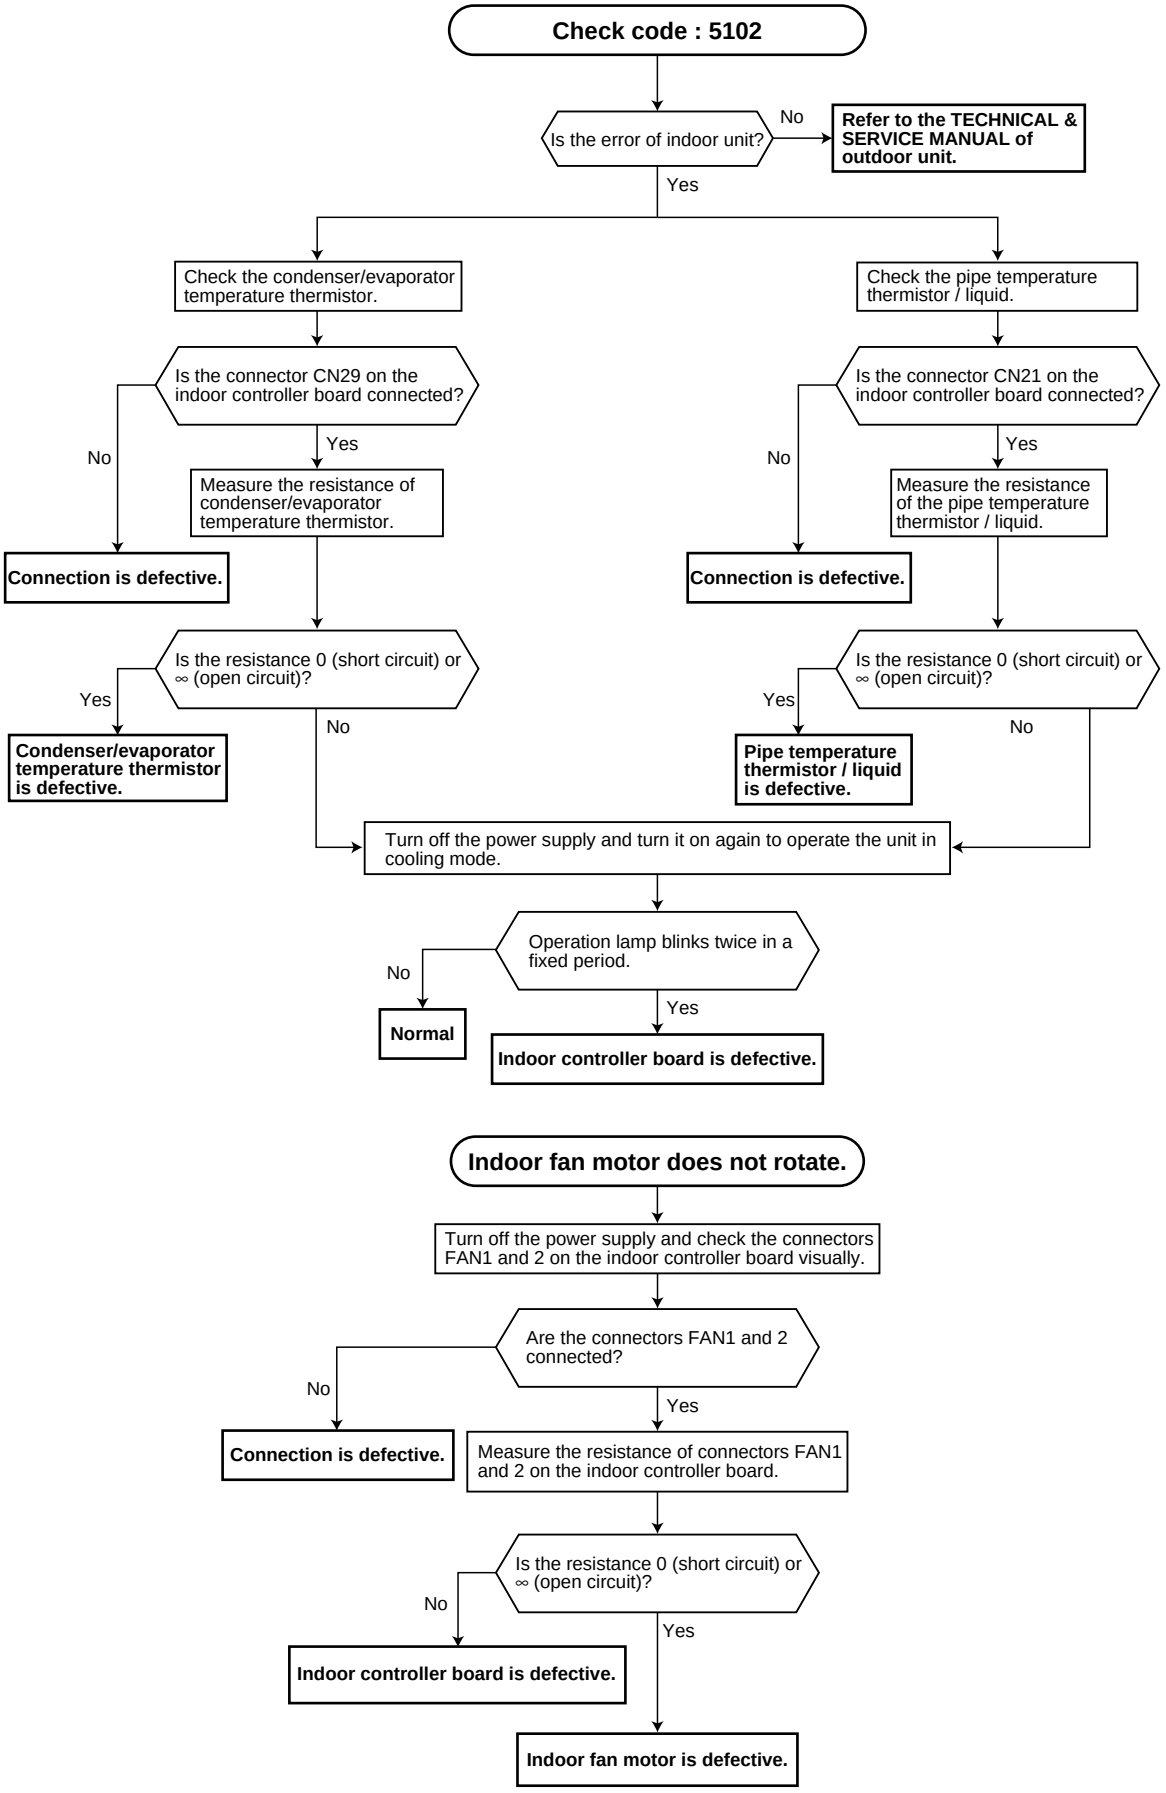
(2) Other case

Phenomenon	Cause	Countermeasure
Not working of remote controller switch ON/OFF	A connector attaching the panel to the body is not connected.	Connect it.
	Short circuit the protecting parts in the Indoor controller board.	Check the varistor (ZNR1) and fuse (FUSE) out in the Indoor controller board.
	Trouble of the Indoor controller board.	Check the Indoor controller board out.
	Wiring between the indoor and the wired remote controller is coming off.	Check the wiring between the Indoor and the wired remote controller.
	Trouble of the remote controller.	Exchange the remote controller.
Working the Indoor units and not working the outdoor units.	Wiring between the indoor and outdoor is coming off.	Check the wiring out between the indoor and outdoor.
	Difference of wiring polarity between the indoor and outdoor.	
	Trouble of the outdoor inverter P.C. board.	Check the outdoor inverter P.C. board.
	Trouble of the contactor (52C).	Exchange the contactor.
	Malfunction of outdoor unit.	Refer to the TECHNICAL & SERVICE MANUAL of outdoor unit.
Not rotating the fan in the indoor unit.	Fan motor connector is coming off.	Check the connector out.
	Trouble of the Indoor controller board.	Check the fan motor output of the Indoor controller board.
	Trouble of the fan motor.	Check the resistance value between the each tap of fan motor.
Horizontal vane doesn't work.	A connector attaching the panel to the body is not connected.	Connect it.
	Fixing of horizontal vane.	Check if the connector for vane motor is connected.

Check of indoor controller board and indoor fan motor







Check code : 5102
Is the error of indoor unit?
No
Refer to the TECHNICAL & SERVICE MANUAL of outdoor unit.
Yes
Check the condenser/evaporator temperature thermistor.
Check the pipe temperature thermistor / liquid.
Is the connector CN29 on the indoor controller board connected?
Is the connector CN21 on the indoor controller board connected?
No
Yes
Measure the resistance of condenser/evaporator temperature thermistor.
Measure the resistance of the pipe temperature thermistor / liquid.
Connection is defective.
Connection is defective.
Is the resistance 0 (short circuit) or ∞ (open circuit)?
Is the resistance 0 (short circuit) or ∞ (open circuit)?
Yes
No
Condenser/evaporator temperature thermistor is defective.
Pipe temperature thermistor / liquid is defective.
Turn off the power supply and turn it on again to operate the unit in cooling mode.
Operation lamp blinks twice in a fixed period.
Normal
Indoor controller board is defective.
Indoor fan motor does not rotate.
Turn off the power supply and check the connectors FAN1 and 2 on the indoor controller board visually.
Are the connectors FAN1 and 2 connected?
Connection is defective.
Measure the resistance of connectors FAN1 and 2 on the indoor controller board.
Indoor controller board is defective.
Indoor fan motor is defective.
